

FEDERATED STATES
OF MICRONESIA

CHUUK STATE

Infrastructure Development Plan

Pacific Region
Infrastructure Facility

Foreword by Governor

Public infrastructure is the backbone of any thriving society, playing a crucial role in economic growth, social well-being, and environmental sustainability. This Infrastructure Development Plan presents our 10-year capital development needs to ensure our public infrastructure assets meet the current and future demands from our community. This includes:

- **Transportation**: Improving road networks, air and seaports, to facilitate efficient and safe movement of people and goods driving productivity.
- **Energy**: Upgrading energy grids and promoting renewable energy sources to ensure a reliable and sustainable power supply.
- **Water and Sanitation**: Enhancing water supply systems and wastewater management to provide clean water and maintain public health.
- **Public Facilities**: Building and renovating schools, hospitals, and recreational facilities to improve quality of life and community services.
- **Marine, Agriculture and Coastal**: Protecting our coastlines and communities from climate events and ensuring our primary economic sectors remain productive.

Infrastructure often has a high cost, requires careful planning and multi-faceted design. It needs ongoing management and maintenance to deliver critical services to the public. By investing in our infrastructure, we aim to create a foundation for long-term prosperity and a higher quality of life for all residents.

The five volumes of this 2025-2034 IDP were approved and adopted by the twenty third congress of the Federated States of Micronesia on 24 January 2025.

Governor, Chuuk State
Alexander Narruhn

Abbreviations

Key acronyms used in document

ADB	Asian Development Bank
AIP	Annual Implementation Plan
FPA	Fiscal procedures agreement
FY	Full fiscal year (1 October to 30 September)
IDP	Infrastructure development plan
IMF	Infrastructure maintenance fund (Compact)
IPIC	Infrastructure planning and implementation committee
JEMCO	Joint Economic Management Committee
MCA	Multi-criteria analysis
O&M	Operations and maintenance
PBN	Project briefing note
PDM	Project development manual
PMO	State project management offices
PMU	Program management unit within DTC&I
SDP	Strategic Development Plan
WBG	World Bank Group

Key infrastructure agency abbreviations

CPUC	Chuuk Public Utility Corporation
CSOP	Chuuk State Office and Planning Office
DEOC	Disaster and Emergency Office of Coordination
DHS	Department of Health Services
DOA	Department of Agriculture and Fisheries
DOE	Department of Education
DOMR	Department of Marine Resources
DOT	Department of Transport
DTC&I	Department of Transportation, Communications and Infrastructure (FSM)
EPA	Environmental Protection Agency
FSMTC	FSM Telecommunications Corporation
FSMTCC	FSM Telecommunications Cable Corporation
ODA	Office of Overseas Development Assistance
PMO	Project Management Office

Key Information (for busy people)

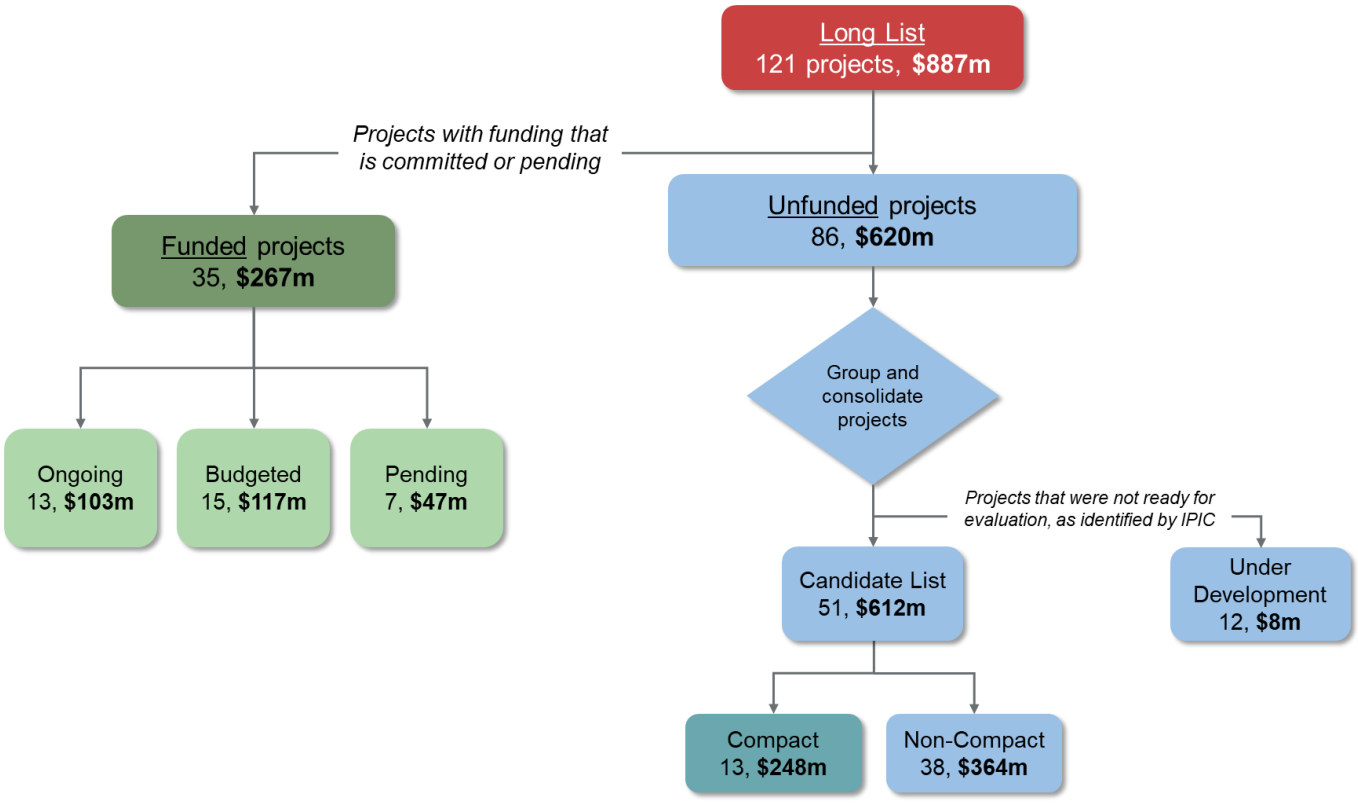

In 2025, the Federated States of Micronesia enters its third 10-year development cycle under the US Compact of Free Association. Under Compact III the US will provide over $350m of capital development, with more than $1bn of additional investment likely to come from multilateral and bilateral development partners, including US agencies. The **Infrastructure Development Plan (IDP)** provides these investment partners with a clear set of prioritized projects that meet the development needs of the state.

Assembling the long-list of infrastructure investment needs over the next 5-10 years required a high degree of engagement across all public sectors agencies managing infrastructure.

Consultation to compile the state and national long-list of funded and unfunded capital investment projects

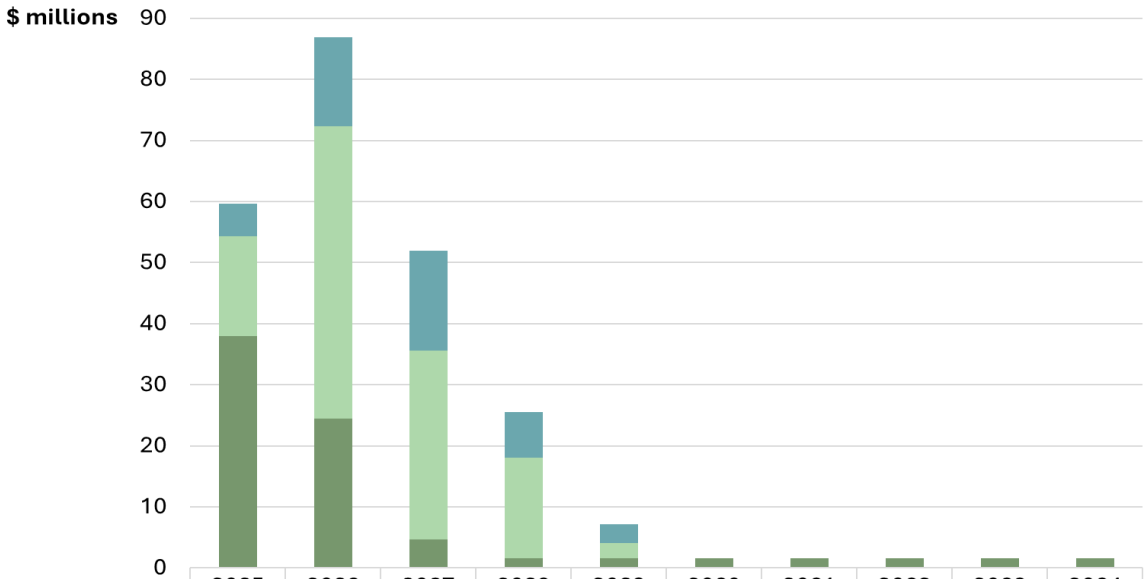

Screening the long-list and prioritizing the candidate list of unfunded, investment ready projects (Figure 5)

The **current funded** project commitments include 35 projects totalling $267m with $103m ongoing and a further $117m in the budget to start. The forecast annual expenditure 2025-2028 across these funded projects is approximately $44m per annum which is indicative of the current delivery capacity across the state.

Current funded commitments and forecast expenditure (Figure 9)

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034
Pending	5.3	14.6	16.4	7.4	3.1	-	-	-	-	-
Budgeted	16.4	47.8	30.8	16.5	2.5	-	-	-	-	-
Ongoing	37.9	24.5	4.7	1.6	1.6	1.6	1.6	1.6	1.6	1.6

The **prioritization of unfunded** projects was a 2-stage process. Firstly, a multi-criteria analysis (MCA) was carried out by the consulting team to determine a weighted priority score for each candidate investment project. The MCA considered:

a) Alignment with the Strategic Development Goals
b) Relative urgency – consequence if not funded
c) Likelihood of economic returns
d) Project delivery risk
e) Project complexity and scale
f) Ongoing liability – maintenance and operation

Secondly, the Infrastructure Planning and Implementation Committee (IPIC) considered the results of the MCA and followed a structured voting methodology to finalize and rank the IPIC priority project list.

The IPIC will periodically review the priority list (and ranking of projects within the list) to accommodate ongoing changes as new projects are submitted (e.g. emergency works, asset failures etc) and as existing projects move toward implementation. At the time of publication (2024), the IPIC priority list identifies 13 projects for Compact funding (totalling $248m) and a further 38 projects for development partner funding (totalling $364m).

IPIC list of investment-ready priority projects (Tables 19-21)

ID	Lead	Type	Project/Program	Cost ($m)*
Priority Projects for **US Compact** Funding

			Total Proposed for Development Partner Funding	**364.0**
			Overall Unfunded Investment Required for Priority Projects	**$612.0**

Section I.

Infrastructure Planning Context

This section of the development plan presents the overarching project planning framework which supports the systematic identification, planning, screening and prioritization of infrastructure investments across FSM in its entirety. Subsequent sections within the plan are more State specific and present the outputs from planning and prioritization process discussed here-in.

Contents of this Section:

I.1 Introduction to the Plan

I.2 More Robust Planning Decisions

I.3 Projects Included in the Plan

I.4 Approach to Plan Development

Engagement during first round of consultations to identify the long list of funded and unfunded projects

1.01 Introduction to the Infrastructure Development Plan

The IDP captures the pipeline of agency identified development needs and prioritizes these projects to best align with the strategic development goals of the state. Priority projects are then matched to realistic funding sources over a 10-year horizon.

Role of Infrastructure

Infrastructure assets exist to provide a service to the public and the communities. For example, ports allow goods to be imported and exported, roads allow those goods to get to market and power transmission lines allow those markets to operate. When infrastructure fails, these services are interrupted. Reliable and resilient infrastructure is one of the cornerstones of sustainable development, especially in the era of climate change. All of the important services provided by public sector agencies, and the private sector ventures that create jobs and build wealth, are built on the foundations provided by infrastructure across the islands of the Federated States of Micronesia. The country's infrastructure systems, from transportation to water supply, from urban planning to energy grids, must be developed not only with climate resilient infrastructure, but for the greater purpose of security, health, and prosperity for its communities.

Multi-Sector, Multi-year Investment Plans

An **Infrastructure Development Plan (IDP)** examines the infrastructure needs of all sectors of the nation; be they economic, social or administrative in nature, drawing on the existing hierarchy of national, sectoral and institutional level strategic plans. This brings together a list of candidate investment projects, which are screened and prioritized in a process that is both systematic and transparent. At the same time an assessment is made of likely resource availability from sources including government, state-owned enterprises, development partners, and private sector and community interests, to enable the infrastructure investment program to be scaled appropriately.

Primary Objectives

The primary aim of a multi-year Infrastructure Development Plan is to guide efficient government infrastructure investment that meet the socio-economic development objectives over a 10-year horizon. An IDP allows the identification of clear priorities for infrastructure investments; it improves the alignment of expenditures with available resources; and it can secure better coordination of investments. These efforts in turn can ensure that the impacts of investments are maximized. Moreover, in an environment of heavy dependence on aid, good planning can secure more timely and reliable commitments of development partner resources.

1.02 Delivering More Robust Planning Decisions

Deeper thinking around the costs and impact of infrastructure projects early in the planning cycle, along with a systematic and collaborative prioritization process leads to more transparent investment decisions and greater levels of public and development partner support.

Multi-Criteria Analysis and Screening

At the heart of the IDP screening process is a multi-criteria analysis and prioritization (MCA) framework. Prioritization of candidate infrastructure projects helps focus planning activity on the projects with the greatest potential impact on the achievement of state development objectives. Infrastructure needs are always likely to exceed available resources, and prioritization helps put scarce resources to the best use.

Figure 1: Screening of Projects

Source: Project Development Manual, 2024

MCA screening criteria consider:

g) Alignment with the Strategic Development Goals
h) Relative urgency – consequence if not funded
i) Likelihood of economic returns
j) Project delivery risk
k) Project complexity and scale
l) Ongoing liability – maintenance and operation

Environmental Resilience

The effects of climate change and planning for climate mitigation and adaptation are cross-cutting issues that impact many infrastructure projects. The focus on climate change mitigation and adaptation has increased in recent years, alongside global efforts on greenhouse gas emissions and increased understanding of the costs and benefits of mitigation and adaptation measures.

Three key aspects of the IDP assist governments to be more resilient to climate change and natural disasters and to help ensure the natural environment is protected:

1) Projects are prioritized based on their contribution to climate adaptation, resilience to natural disasters and overall environmental impact.
2) The funding strategy identifies sources of climate funding (e.g. Green Climate Fund, Adaptation Fund, and Climate Investment Fund) and aligns candidate projects with those funds.
3) The 10-year pipeline and associated project briefing notes allow early engagement with fund providers to discuss and refine project briefs to best align the objectives of the fund with the needs of government.

Economic Resilience

Two key aspects of the IDP assist governments to be more economically resilient:

1) Projects are screened and prioritized based not only on the financial benefits they deliver, but also on how sustainable the infrastructure is (e.g. can the ongoing operation and maintenance costs be funded by the utility?)
2) A financing strategy is included within the IDP to ensure the 10-year infrastructure program budgets are within sustainable funding envelopes.

Social Benefits

In addition to environmental and economic criteria, the MCA ranks projects based on their benefit to the community (e.g. social services, regional development, accessibility, and equality).

Benefits of an Infrastructure Development Plan

The IDP planning framework will ensure:

- Attention is given to **long-term** solutions rather than short-term affordability or convenience.
- **Transparent decision making** on strategic investments to provide greater public confidence.
- Economic **sustainability** is improved through the careful planning and prioritization of projects.
- Investments are **objectively prioritized** across disparate, multi-sector projects.
- Active **engagement** of key infrastructure agencies in scheduling and prioritizing investments across sectors.
- **Priority projects** contribute to the achievement of national and international development agendas and goals, including the nation's Strategic Development Plan **(SDP) goals**.
- Informed communication with financial institutions and potential public or private investors.
- The public enjoy better, more dependable services without unexpected failures or indefinite interruptions.

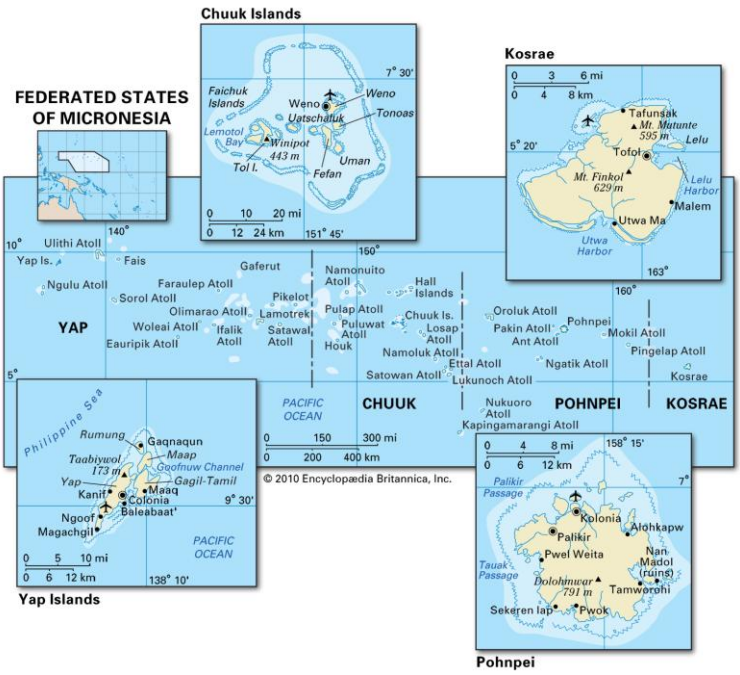

1.03 Projects Included in the Plan

Country Context

The Federated States of Micronesia (FSM) is an archipelagic nation in the Western Pacific Ocean. Its relatively small land area of just over 700 km² is spread across 607 islands, with 74 of them inhabited.

The FSM is composed of four semi-autonomous states: Yap, Chuuk, Pohnpei, and Kosrae. The population is estimated to be around 105,000, with 45% residing in Chuuk, 37% in Pohnpei, 11% in Yap, and 7% in Kosrae. Each state includes a main island and numerous outer islands, except for Kosrae, which has no outer islands.

Figure 2: States of FSM

Source: Updated Nationally Determined Contribution of FSM (2023)

The economy primarily relies on fisheries and agriculture, with nearly half of the workforce engaged in subsistence fishing or farming. The private sector economy is supplemented by tourism and trade in manufactured goods. Over 45% of all workers in the FSM are employed in the public sector. Government revenue mainly comes from fishing fees, the Compact of Free Association (COFA) with the United States, and other foreign aid.

Projects in the Plan

The IDP outlines the state governments priorities for major infrastructure initiatives over the next 10 fiscal years. The prioritization of projects will be reviewed at regular intervals as part of the national and state planning and budgeting processes.

The plan covers both funded and unfunded development projects. Funded projects include ongoing or budgeted projects currently being implemented. Unfunded projects are yet to secure funding.

The broad investment types for development projects included in the IDP are defined in Table 1. The table also summarizes the financial threshold criteria for inclusion in the IDP. Annual operations and maintenance (O&M) expenditure and smaller projects are not included in the IDP.

Table 1: Capital Development "Projects" Included in the IDP

Project Type	Definition	Examples
All Capital Investment > $300,000		
New	Construct new assets or build new infrastructure.	Construction of a new wharf, runway, highway, hospital, housing complex, etc.
Upgrade	Upgrade or improve existing capacity of expand extent of assets.	Road widening, seismic strengthening, power grid or water reticulation expansion, etc.
Rehabilitate	Refurbish, rejuvenate or rehabilitate existing assets (like with like).	Building refurbishment, dredging, road AC overlay, roof replacement, etc.
Services	Technical assistance (consulting) to develop or strength infrastructure services.	Environmental impact assessments, master plans, strategies, legislative support, design services, etc.
Purchase	Large capital purchase of property, plant or equipment.	X-ray machine, gravel crusher, generator, marine vessels, airport fire truck, etc.
Covered under Infrastructure Maintenance Fund (IMF) or Government Budgets (**not in IDP**) – typically <$300k		
Periodic Maintenance	Time-based 'capital maintenance' required to prolong life of asset.	Chip seal road, generator overhaul, painting buildings, engine overhaul, etc.
Routine Maintenance	Day-to-day maintenance to keep assets operational.	Maintaining roadside features and parkways, painting buildings, repair of potholes, etc.
Operating Costs	Day-to-day operational costs to keep assets operational.	Power, fuel, salaries, consumables, etc

Source: IDP Mainstream Report and Recommendations (March 2024)

Ensuring infrastructure is resilient to extreme weather events is a goal in FSM's Strategic Development Plan

Primary Infrastructure Sectors

The IDP includes infrastructure development initiatives of national, state and local significance. It is the result of extensive consultation with infrastructure managers and stakeholders at national, state and local level with project spanning the 12 primary infrastructure sectors below:

Road and Bridges	*Roads, bridges, culverts, signs, lighting*
Air Transport	*Runways, apron, terminals, navaids, vehicles*
Maritime Transport	*Wharfs, jetties, cranes, vessels, lighting*
Water and Sanitation	*Treatment plants, intakes, pipes, pumping*
Electric Power (Energy)	*Generator, solar panels, transmission lines, transformers*
Coastal and Environment	*Seawalls, land reclamation, protection works*
Solid Waste Management	*Collection trucks, heavy equipment, facilities*
Education	*School buildings, administration blocks, school water tanks*
Health Care	*Hospitals, specialist equipment, medical centres, generators*
Gov. Buildings and Facilities	*Admin buildings, sports facilities, stadiums, museum, parks*
Agriculture and Fisheries	*Processing plants, markets, access roads*
Telecom and ICT	*Cell towers, fibre cables, networking*

1.04
Approach to Developing the Plan

As with the 2016 IDP, the development of the IDP involved three main components; process, funding and projects, with the overall approach to assembling this IDP illustrated in Figure 3 below.

Figure 3: Assembling the IDP

Source: Authors

Step 1: Enhance Processes

In March 2024, the IDP project team conducted exploratory workshops in each state to capture the lessons learned from the past 2016 to 2024 IDP cycle and explore enhancement opportunities for both assembling the 2025 IDP and managing its implementation.

IDP Mainstream Workshops (March 2024)

The resulting report entitled *Review of the 2016 Infrastructure Development Plan and Mainstreaming Recommendations for 2024 Update*, referred to as the Mainstream Report, identified a total of 22 enhancements of which eight were prioritized for improving the quality of the 2025 IDP program:

1. Strengthen Project Governance Structure
2. Templated Project Briefing Note (PBN)
3. Project Classification and Database Structure
4. Develop an Objective MCA Framework
5. Consider Delivery Risk and Capacity
6. Standardize the IPIC Screening Process
7. Publish a Project Development Manual
8. Greater Engagement of Stakeholders

Step 2: Determine Funding

The second key component of the IDP is to review sources of revenue, from government budgets, Compact allocations, and loans and grants from development partners and determine the likely levels of funding available from infrastructure over the next 10 years. This requires some backward-looking analysis, discussions with key partners and extrapolating that information into forward projections – funding envelopes.

Table 2: Funding Sources 2016-2024

Entity	Examples
Compact	▪ Government of US
Non-Compact US Aid	▪ Federal Aviation Administration (FAA) ▪ Department of Defense (DoD) ▪ Department of State (DOS)
Bilateral Partners	▪ Japan International Coop Agency ▪ DFAT Australia
Multilateral Partners	▪ Asia Development Bank ▪ Global Green Growth Institute ▪ Green Climate Fund ▪ World Bank Group

Source: ODA records and 2016 IDP

The resulting analysis and its state-level implications are presented in **Section II** of the IDP with the final Funding Strategy presented in **Section V.**

Step 3: Prioritize Projects

The third and most significant component of the IDP was to conduct a series of workshops and consultations across FSM to unearth infrastructure investment projects, both funded and unfunded, and capture these in a structured database for analysis and subsequent prioritization (**Section III**).

Ranking and prioritization of the unfunded "investment ready" projects was carried out using a multi-criteria analysis and IPIC voting methodology described in Section 4 of the PDM and summarized in **Section IV** of this IDP.

Finally, a funding strategy was developed to match the pipeline of unfunded priority projects with potential funding sources (**Section V**).

Prepare IDPs

This IDP is the culmination of the work described above and is one of 5 standalone volumes:

1. National
2. Chuuk State
3. Pohnpei State
4. Kosrae State
5. Yap State

Section II.

Funding for Infrastructure

This section of the development plan presents the top-down analysis of infrastructure funding in order to establish indicative “thresholds” for infrastructure investment at a state level over the next 10-years. These thresholds help set realistic expectations about the relative size of the priority list screened and prioritized in **Section IV** and ultimately inform the funding strategy presented in **Section V**.

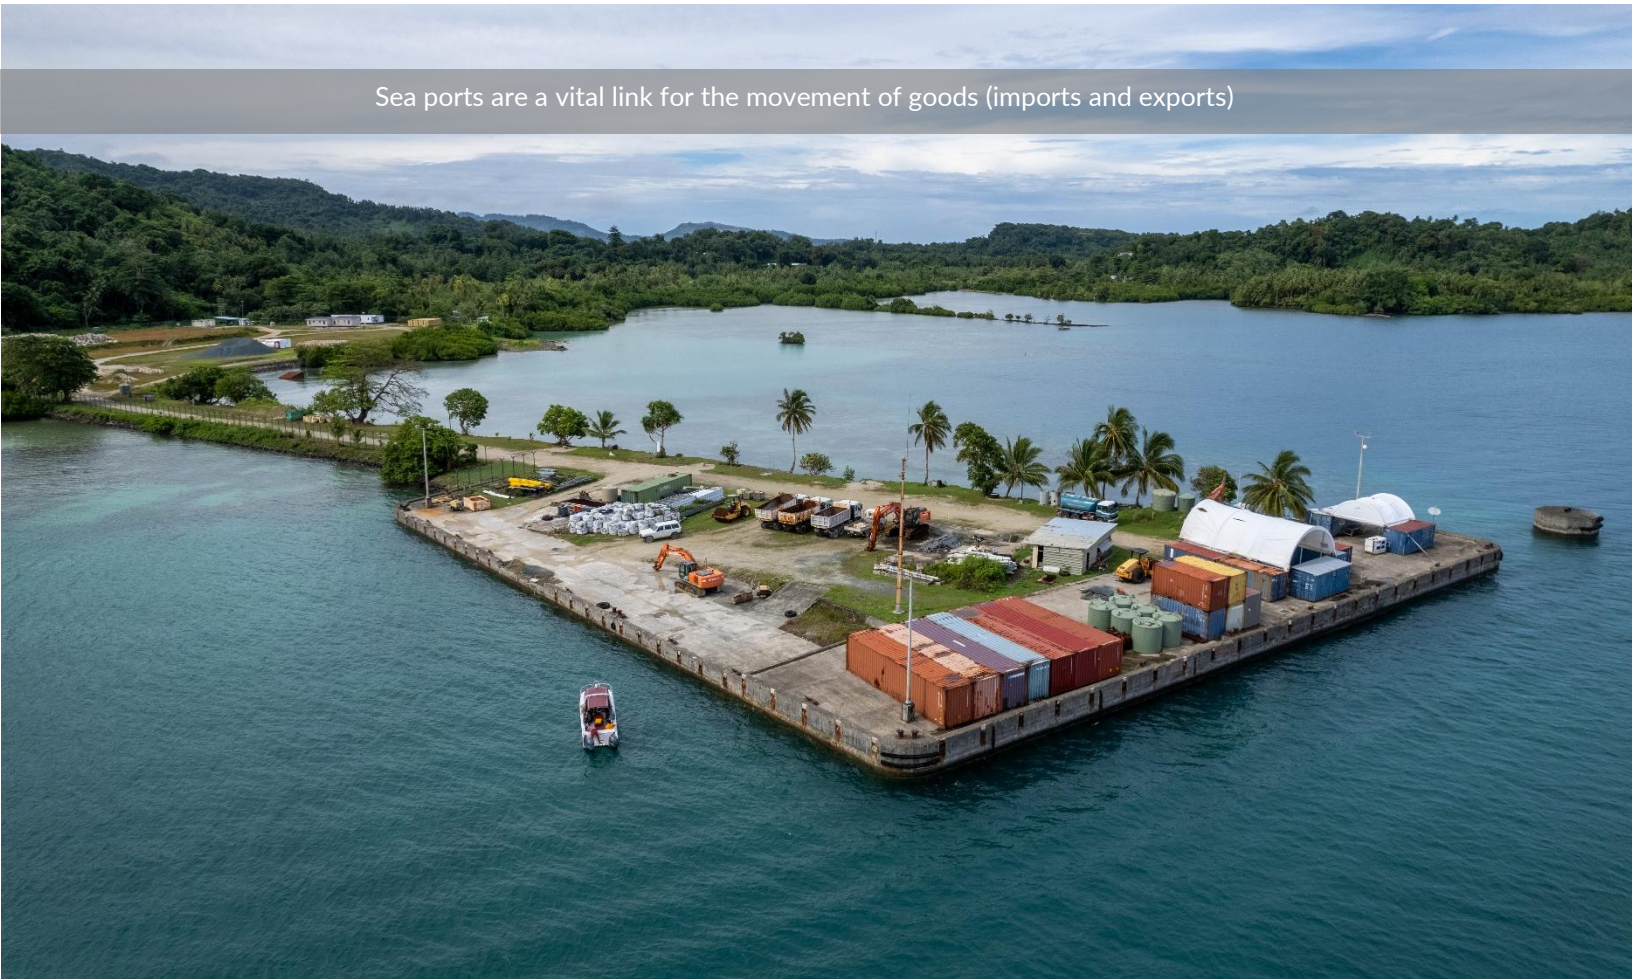

Contents of this Section:

II.1 Economic Environment

II.2 Compact Infrastructure Development Funding

II.3 Overseas Development Assistance Grants and Loans

II.4 Funding Threshold Projections

Sea ports are a vital link for the movement of goods (imports and exports)

2.01 Economic Environment

FSM's external Debt-to-GDP ratio is low due largely to the budget assistance under the US Compact Agreement, and levels of concessional funding provided by other development partners. However, increasing gross national income (GNI) may impact FSM's access to concessional loans over the next 10-years

Macroeconomic Assessment

FSM experienced a short-lived recovery in 2021 from Covid, but economic activity has since stagnated because of additional shocks. Economic growth rebounded to 3 percent in FY2021, led by the fisheries sector and government support but is estimated to have averaged zero in FY2022-23. Inflation reached a decade high 6.2 percent driven by higher import prices for fuel and food, as well as supply bottlenecks. FSM is also facing significant labour shortages exacerbated by outward emigration. Substantial fiscal surpluses in recent years contributed to a decline in public debt to 12.4 percent of GDP, while the assets of the trust funds have risen to 323 percent of GDP.

FSM's near-term economic prospects will get a boost from higher public investment. Growth in FY2024 is projected at 1.1 percent before accelerating further to 1.7 percent underpinned by continued recovery in tourism, as well as higher public spending partly funded by the higher grants under the new Compact of Free Association (COFA) agreement with the United States (to be implemented starting in FY2025). However, without significant reforms, economic growth is likely to converge to the historical average of around **0.7 percent over time**. Inflation is expected to gradually decline to around 2 percent.

The FSM economy remains highly vulnerable to shocks, such as an increase in global commodity prices, extreme climate events, and potential delays of the COFA agreement.

Moreover, the acceleration of outward migration would severely jeopardize already constrained labour supply, impacting implementation of large public projects. The underdeveloped private sector remains vulnerable, and deteriorating infrastructure hinders growth and social goals, especially on health. The adverse impact of climate change is increasingly being felt raising food security concerns.

Government Debt

As of June 30, 2023, total public debt stood at $58.0 million or equivalent to **16.8 percent of GDP** (Table 3). Outstanding debt comprised of external debt and domestic debt of which $54.7 million or 94.3 percent was for external debt and $3.3 million or 5.7 percent was for domestic debt. Of this, $12.4 million was for government guarantees and $12.0 million was for on-lending. Public debt decreased by $1.2 million (0.4 percent) when compared to March 2023.

There was a significant annual decline in FY2021, because of principal repayments and the US Department of Agriculture's Rural Utilities Service (USDA RUS) writing off $8.2 million in debt owed to them by the FSM Telecommunications Corporation.

Table 3: Debt Statistics ($m)

	FY2019	FY2020	FY2021	FY2022	Jun-2023	Annual % Change
External Debt (by Creditor)	**73.8**	**75.3**	**62.9**	**59.4**	**54.7**	**-1.3%**
Asian Development Bank	49.2	47.5	44.5	41.1	37.7	
RUS	19.3	19.3	11.0	11.0	9.8	
EBRD	0.7	3.8	3.4	3.4	3.4	
Bank of Guam	4.6	4.7	4.0	3.9	3.8	
Domestic (FSMDB)	**4.0**	**4.8**	**3.5**	**0.9**	**0.9**	**0.0%**
Total Public Debt by State	**77.9**	**80.1**	**66.4**	**62.7**	**58.0**	**-1.2%**
National	36.5	40.8	29.7	27.4	26.9	
Chuuk	11.3	10.7	9.9	9.6	8.7	
Kosrae	3.6	3.4	3.1	2.9	2.2	
Pohnpei	11.5	10.8	10.1	9.4	8.1	
Yap	15.9	14.4	13.6	13.4	12.1	
Debt to GDP Ratio	22.5%	23.2%	19.4%	17.9%	16.8%	-1.2%

EBRD = European Bank for Reconstruction and Development, FSMDB = Federated States of Micronesia Development Bank, FY = Financial Year, GDP = Gross Domestic Product, RUS= Rural Utilities Service

Source: FSM DoFA Debt Bulletin June 2023

Concessional Loans

Concessionary terms for loans mean FSM has access to funds for infrastructure at a rate below market lending rates. Eligibility for concessional loans and grants is dependent on individual development partner policies and decision-making.

Most infrastructure projects over the last 10 years have been funded by grants or concessional loans, as FSM is a **lower-middle income** country. This classification, assigned by the World Bank Group, is based on the gross national income (GNI) per capita of the previous calendar year. The threshold for lower-middle income countries is between $1,146 and $4,515 (at 1 July 2024) . FSM had a reported gross national income per capita of $4,140 in 2022 (WBG, 2024) moving it toward the upper-middle income band, potentially impacting its level of access to concessional funding from some development partners.

Financing Infrastructure

The latest debt sustainability analysis for FSM was reported jointly by the World Bank and the International Monetary Fund in October 2021. It assessed both the exposure and risk of debt stress as "High". This rating can reduce FSM's access to loan funding for infrastructure. Should the multilaterals reduce their concessional loans or increase interest rates, this will automatically reduce the funding available for new infrastructure, and its maintenance and operations. Hence, it's crucial that the infrastructure projects built in the next 10 to 20 year period increase FSM's economic independence, protect its natural resources, its environmental wealth and the health and education of its residents and citizens.

2.02 Compact Infrastructure Development Funding

This IDP is produced as a prerequisite requirement to access Compact funds. However, to maximize the value it delivers it has been expanded to also cover non-Compact financing (subsequent sections).

Compact Agreement

The Compact of Free Association between the Federated States of Micronesia and the United States was initiated by negotiators in 1980 and signed in 1982. Compact was approved by the citizens of the FSM in a plebiscite held in 1983. Legislation on the Compact was adopted by the US Congress in 1986 in the Compact Act of 1986 (Pub. Law 99-239) and signed into law on November 13, 1986. The US Government and the FSM Government entered a Compact of Association Agreement in 1985. It has since been amended in 2003 (Compact II) and 2023 (Compact III). These have been legislated by both the US Congress and the Congress of FSM.

US Government Public Laws: US Pub. Law 99-239, Compact of Free Assoc. Act of 1985, 48 USC 1681 note. 59 Stat. 1031 and amended Dec. 17, 2003 by House Jt. Res. 63; US Pub. Law 108-188. 2023 Amended by House Ht. Res 96.

Government has set up a Joint Economic Management Committee (JEMCO), consisting of three members each from US Government and FSM Government, to be responsible for oversight and accountable for the assistance provided under the 2003 Amended Compact and the 2023 Amended Compact, and to provide the effective use of the funding provided thereunder.

Grant funding is to be provided by the US Government for the period 2024 – 2043 in accordance with Compact III. FSM Public Law 23/30 sets out the proportional allocation of this fund across the National and State Governments (Table 4). The proportional split between the states is the expected average of allocated grants over the full ten-year period of Compact III.

Table 4: Compact III Allocation to States

State	Compact III Funding Allocation
National	10.0%
Chuuk	38.0%
Kosrae	10.89%
Pohnpei	25.31%
Yap	15.8%

Source: Public Law 23/30 and Fiscal Procedures Agreement 2023.

Table 5 sets out Compact's requirements for the contents of the Infrastructure Development Plan.

Table 5: Development Plan Requirements

The **Infrastructure Development Plan** must include:

i. A single, integrated list of state and national projects for new and reconstructed capital infrastructure to be funded with Sector Grants for public infrastructure; and
ii. For each project, a preliminary cost estimate, scope of work, and implementation schedule.

Each proposed project must reasonably further one or more of the goals and broad strategies outlined in the SDP.

Source: Fiscal Procedures Agreement 2023 Compact

Historic Compact II Investments

The Compact Management Division within the President's Office is responsible for monitoring Compact expenditure. It retains records of requests, approvals, postponements and rejections, as well as actual funds appropriated for Compact funded infrastructure projects, and the maintenance of them, by FSM National and State Governments.

A working copy of its tracking database was provided to support the analysis reported in Table 6. The actual annual expenditure on infrastructure does not line up with annual allocations because the expenditure is only for projects approved by JEMCO through the Annual Implementation Plan (AIP), and depends on the project implementation schedule. Other factors that disrupt planned spending include project delays, cost overruns, scope changes and external economic factors.

The ten-year total expenditure presented in the Table 6 is $139.1m, compared to a ten-year total allocation of $202.4m. The carry-over funds from Compact II are available to be spent in subsequent years (through to 2043), but like any sector grant, they can only go towards projects that are approved by JEMCO.

Table 6: Actual Annual Compact II Infrastructure Expenditure Compared to Country Allocation ($m)

State	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24
National	3.6	0.5	1.4	0.8	4.0	0.0	11.1	0.0	1.8	0.2
Chuuk	0.5	4.0	1.0	1.4	1.0	3.4	1.8	4.4	2.0	1.2
Kosrae	0.1	1.2	0.1	0.7	1.2	0.9	0.6	0.6	42.4	0.8
Pohnpei	2.6	1.0	0.8	9.0	2.4	0.8	2.6	0.3	3.8	1.5
Yap	3.4	1.4	2.5	0.5	4.5	0.7	0.2	0.5	6.8	1.1
Actual Expenditure	10.2	8.1	5.8	12.4	13.0	5.9	16.2	5.8	56.8	4.8
Allocations	22.8	22.8	15.0	2.6	6.9	24.2	24.2	23.9	25.0	35.0
Difference	12.7	14.7	9.1	(9.8)	(6.1)	18.3	8.0	18.0	(31.8)	30.2

Notes:

FY15 = Financial Year 2015.

Tracking of the infrastructure expenditure in the database was only 80% complete.

2023 Amended Compact III Funding Forecast

Under Section 266 of the 2023 Amended Compact, FSM is to receive grant payments of $140 million per year FY2024 to FY2043. The qualifying sectors include health, education, public infrastructure, private sector development, the environment, public sector capacity building, and enhancing reporting and accountability. Sector grants for public infrastructure shall not be less than a three-year moving average of 25% of the annual grant amount or approximately **$35m per year**.

Beginning in FY2024, the Infrastructure Maintenance Fund (IMF), pursuant to Section 211 of the Amended Compact, shall be governed by Article VII of the Fiscal Procedures Agreement 2023 (FPA). Annual contributions to the IMF start at 7% of the $140 million in FY2024 and increase thereafter (Table 7). The IMF is for the repair and maintenance of US Funded Infrastructure only and it cannot be used for expansion or repurposing infrastructure. Funds from the health and education grants may also be used to fund maintenance requirements in those sectors.

When allocating Compact funds, "Priority should be given to, but not limited to, primary and secondary education capital projects and projects that directly affect health and safety, including water and wastewater projects, solid waste disposal projects, healthcare facilities, airport and seaport improvements, roads, seawalls, and energy development including renewable energy that cannot be funded through the rate structure." (FPA, 2023).

Chuuk State's ten-year indicative **Compact III** funding allocation for sector grants for public infrastructure is **$133m**. In addition to the sector grants for public infrastructure, there are sector grants for environment which may include "environmental infrastructure planning, design construction and operation". The funding allocation for sector grants for environment is unknown.

Table 7: Compact III Allocation for Infrastructure Development

2.03 Overseas Development Assistance Grants and Loans

In addition to US budget support through Compact and Non-Compact grant assistance, FSM receives wide-ranging financial support from development partners bilateral partnerships and multilateral organizations.

Non-Compact Assistance from US

Due to the special relationship between the FSM and the United States, many domestic government departments and agencies provide economic grants, technical assistance, and training opportunities directly to FSM organizations, both government and non-government, as well as external partners working in the FSM. Those who have or are contributing to infrastructure development include:

- Department of Education
- Department of Health and Human Services
- Department of the Interior
- Department of the Treasury
- Federal Aviation Administration (FAA)
- Department of Defense (DOD)
- Department of Energy
- Department of State
- US Agency for International Development (USAID)
- US Dept. of Agriculture's Rural Utilities Service (USDA RUS)
- Environmental Protection Agency
- US Trade and Development Agency

Recent funding from these agencies for FSM infrastructure projects includes support for the East Micronesia Cable and runway rehabilitation.

Analysis of Historic Dev. Partner Assistance

The Office of Overseas Development Assistance (ODA) is responsible for tracking all non-government, non-compact funding assistance and its allocation. At the time of formulating the IDP, the ODA was in the process of developing a database that holds ODA funded project data which will be useful to inform design, development and co-financing of projects listed in this IDP. However, the data currently recorded with ODA was from 2021 to 2023. Recognizing the need for historical data to determine the trend of assistances received by development partners, ODA shared another dataset developed by Lowy Institute. The Pacific aid data from Lowy Institute includes attributes such as project title, brief description, OECD Sector, purpose, budget, and SDG alignment (over 20 metadata fields for each project) While the dataset has the ability to record the "year" the assistance was signed, at the time of analysis 75% of projects did not have this field populated. Since most funds are associated with multi-year programs, *it is not possible to directly report annual expenditures from this dataset*.

The Lowy Institute database contains both infrastructure and non-infrastructure related assistance (e.g. government budget support for the COVID-19 emergency response). An updated dataset was released in November 2024 on the Lowy Institute's Pacific aid map website with aid expenditure from 2006 to 2022. The following filters were applied to identify approximate levels of infrastructure expenditure:

- [Recipient] = Federated States of Micronesia
- [Infra vs HD vs Government vs Other] = Infrastructure
- [Spent/ Committed] = Spent
- [Aid Type] <> Budget Support, or Scholarships/training in donor countries

From a review of Table 8, it is apparent the database does not give a complete view of historic levels of ODA investment. For this reason a number of different data sources have been used to estimate the potential funding envelope as outlined in Section 2.04.

Table 8: Aid Expenditure (2006-2022)

Development Partner	Total Expenditure ($m) [1]	Est. Infrastructure ($m) [2]
Adaptation Fund	6.9	6.1
Asian Development Bank	37.1	33.2
Australia	61.7	22.3
China	89.5	54.2
European Union Institutions	17.6	12.2
Global Environment Facility	3.2	0.0
Green Climate Fund	2.0	0.7
India	0.4	0.4
Japan	186.4	147.5
Korea	4.1	3.8
New Zealand	3.8	3.6
Other agencies	3.6	1.8
United Arab Emirates	3.6	3.6
United States (including Compact)	479.0	255.4
World Bank	87.0	83.7
World Health Organisation	5.3	0.2
TOTAL	**808.09**	**458.43**

Notes:
1. *Exported database covers period 2006-2022. Figures in million USD.*
2. *Excludes filtered non-infrastructure assistance as explained above, e.g. budget support, Scholarships/training in donor countries*
3. *Other agencies include Canada, Food and Agriculture Organisation, France, Germany, Greece, Israel, Italy, Slovenia, Switzerland, Thailand, United Nations Development Programme, and the United Nations Educational, Scientific and Cultural Organization.*

Analysis of Congress Endorsed Grants

Due to ongoing enhancements and inconsistencies in the ODA database presented above, additional analysis was conducted using a database of all Congress-endorsed grants to FSM from 2011 to 2023 in an attempt to getting a better estimate of historic ODA investment levels. Only Congress-endorsed grants from 2021 to 2023 were considered.

The dataset captures project-level data across eight metadata fields, including "Issued Notice Award Date," "Project Description," "Development partner," "Development partner Aggregate," "Sector," "Grant Amount," "CR#," and "Date Adopted." It contains 144 project grant entries from 16 development partner aggregates across approximately 24 sectors. As these are multi-year grants, annual investment reporting is not possible with the available data.

Interrogation of the database found a total of 27 projects with infrastructure components over the 2021-2023 period. Table 9 summarises the findings: In 2021, 49 project grants were endorsed (9 were infrastructure projects). In 2022, 49 grants were endorsed (8 were infrastructure projects), and in 2023, 46 grants were endorsed (10 were infrastructure projects).

Table 9 : Development Partner Grants from 2021 to 2023

	2021		2022		2023	
Development Partner Aggregate	**Total Grants $**	**Estimated Infrastructure**	**Total Grants $**	**Estimated Infrastructure**	**Total Grants $**	**Estimated Infrastructure**
ADB	23.8	23.8	8.0	8.0	5.0	5.0
Australia	-	-	-	-	10.1	10.1
China	25.0	25.0	10.2	10.0	-	-
Forum Fisheries Agency	0.1	-	-	-	-	-
Green Climate Fund	8.6	-	-	-	-	-
IFAD	-	-	-	-	3.6	1.8
Japan	-	-	13.6	11.5	-	-
Korea	0.2	0.2	-	-	-	-
SPC	-	-	-	-	0.1	0.1
United Nations	8.5	5.3	6.9	1.5	10.4	5.2

ADB = Asian Development Bank, IFAD = International Fund for Agricultural Development, SPC = Secretariat of the Pacific Community
Source: Analysis of Congress-endorsed grants database (Congress Endorsed Grants- 2019 202020222023 (003).xlsx)

The value of development partner funding in 2021 has been skewed by two major projects; (i) the Yap International Airport Runway Rehabilitation Project (~$37.2m), and (ii) Road improvements in Pohnpei ($25m). Due to significant data limitations regarding both development partner funding and FSM spending on infrastructure projects, it has not been possible to derive a realistic forecast of development partner assistance from an analysis of historic investment – as the data sources do not present the complete picture.

Moving forward, **it is recommended** that steps be taken to implement more robust data collection and reporting mechanisms that provide detailed project-specific funding information for all non-government, non-compact funding. Strengthening existing data collection and reporting mechanisms will enable more accurate analysis and assessments in future, bolstering planning and resource allocation efforts.

2.04 Estimating Funding Thresholds

Accurately forecasting indicative funding thresholds for Chuuk's infrastructure projects is extremely difficult given the lack of data available. As a result, estimated funding thresholds have been extrapolated from current commitment levels.

Compact III Funding Thresholds

As presented in Section 2.02, Chuuk's indicative Compact III funding allocation for sector grants for public infrastructure is a minimum of **$133m for the next ten years**. There may be carry-over funds from Compact II.

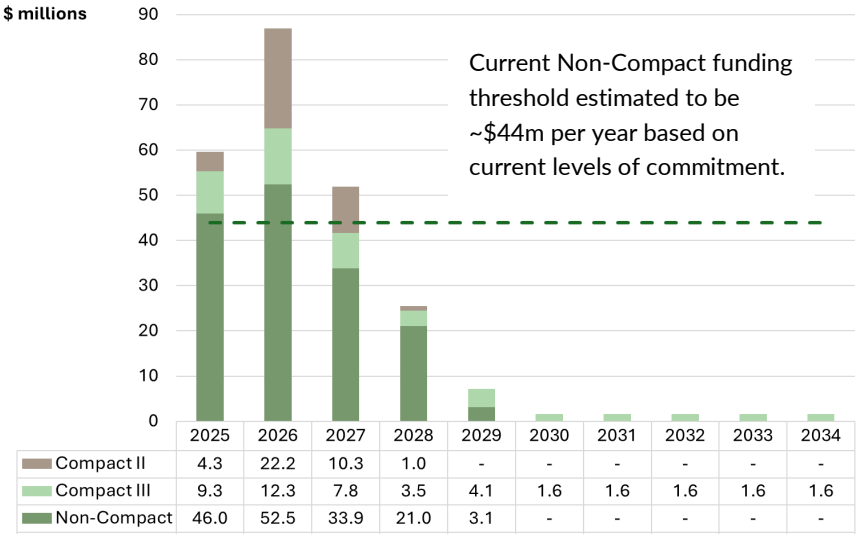

Indicative Non-Compact Funding Thresholds

Estimating an appropriate indicative funding threshold from development partners is more difficult. As outlined in Section 2.03 above, despite working with different datasets it was not possible to accurately report annual levels of historic investment across FSM.

However, during the course of preparing the IDP database of both funded and unfunded projects, infrastructure entities were asked to project out the likely spend for committed funded projects. Figure 4 presents the results of this expenditure forecast.

On the very broad assumption that Chuuk state can continue to gain **development partner** support for their development program at levels similar to existing commitments (expenditure of $44m per year for the next 3 years), then it should be targeting **$440m** of new investments over the next 10 years to sustain the program.

Figure 4 : Projected Expenditure for Current Commitments

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034
Compact II	4.3	22.2	10.3	1.0	-	-	-	-	-	-
Compact III	9.3	12.3	7.8	3.5	4.1	1.6	1.6	1.6	1.6	1.6
Non-Compact	46.0	52.5	33.9	21.0	3.1	-	-	-	-	-

Section III.

Understanding the Pipeline

This section of the development plan provides an overview of the infrastructure sectors and describes the long list of projects and programs for Chuuk State as submitted by the participating entities. This section covers the identification step of the process for infrastructure investments.

Contents of this Section:

III.1 Sector Goals

III.2 Delivery of the Previous Infrastructure Development Plan

III.3 Creating the Long List

III.4 Current Commitments

III.5 Expenditure Forecast for Funded Projects

Chuuk State Consultation Workshop 1 August 2024

3.01 Strategic Development Outcomes for Infrastructure

The priority projects in the IDP need to align with the goals of FSM's Strategic Development Plan (SDP). An understanding of the infrastructure agencies key issues and infrastructure needs sets the context for the long list of infrastructure projects.

FSM's first Strategic Development Plan (SDP) spanned a 20-year horizon from 2004 to 2023 with a vision of "achieving economic growth and self-reliance". The fiscal procedures for the new Compact of Free Association agreement requires an updated SDP to be published no later than March 31, 2025. A draft of the SDP was available on November 31, 2024, and is summarized herein.

The 2025 SDP sets nine (9) strategic development goals.

Table 10: Goals Set in the Strategic Development Plan 2025

Strategic Goals (SG)		Associated Objective
1.	**Cultural Heritage**	Culture and traditions are integrated at all levels of society promoting social cohesion and ensuring equitable and accessible development.
2.	**Education and Human Capital**	FSM aspires to an education system that is high performing, inclusive, and culturally grounded.
3.	**Health and Well Being**	FSM aspires to a sustainable, equitable, and high-quality healthcare system resulting in the enhanced health and well-being of all citizens through improved access and services.
4.	**Gender Equality and Social Inclusion**	An FSM where all individuals have equal opportunities to access and benefit from services, ensuring equitable inclusivity for all people to thrive
5.	**Governance and Institutional Strengthening**	FSM aspires to an effective, efficient, transparent, and accountable public sector, empowering state and local governments to deliver quality services.
6.	**Peace and Security**	FSM aspires to the safety and security of the people and protecting the economy, infrastructure, and information systems from all man made and natural internal and external threats.
7.	**Sustainable Economic Development**	FSM aspires to a vibrant, diverse, and sustainable economy that drives sustainable growth and improves living standards.
8.	**Environmental Sustainability and Climate Resilience**	FSM aspires to a climate change response framework focusing on mitigation, resiliency and management of natural resources. natural resource management framework that ensures climate change mitigation and promotion of resiliency and environmental integrity.
9.	**Infrastructure Development and Sustainability**	Building efficient, effective, and affordable infrastructure that meets community needs while promoting sustainability.

Source: FSM Draft Strategic Development Plan (Nov 2024)

Each Strategic Goal has a number of corresponding Strategic Outcomes. Those that set the direction for infrastructure planning and investment decisions have been summarized in Table 11.

Table 11: Strategic Outcome Areas for Infrastructure Planning

Strategic Outcomes (SO)	Development Priorities
SO#5.6: **Official Development Assistance** *ODA oversight and implementation promoting the economic development and social well-being of the FSM.*	1. ODA appropriated in alignment with development priorities as identified in the SDP (National and State) 2. The donor and income base is diversified resulting in an enhanced the economic outlook of the FSM
SO#8.1: **Official Development Assistance** *Mechanisms that ensure the social, economic, environmental and infrastructure framework is in place so that communities can withstand the impacts of natural disaster and climate change.*	1. Climate-resilient infrastructure and early warning systems are operational across all states; net zero emissions targets are monitored and on track to meet UNFCCC commitments. 2. Robust partnerships and funding mechanisms for environment projects are designed and coordinated in order to ensure prioritization of funds to meet climate and resiliency targets. 3. A framework of adaptation and mitigation plans in place to ensure FSM has the capacity to address the impacts of natural and man-made disasters
SO#8.5: **Renewable Energy** *Diversify energy options and improve energy security while reducing the carbon footprint of the FSM.*	1. Reduction of imported energy through expanded implementation of renewable energy sources. 2. Increase employment in field of renewable energy. 3. Diversified energy supply providing FSM population with access to cleaner and less costly energy supply options.
SO#9.1: **Service Access and Delivery** *Equitable, affordable and sustainable access to services, including transport, energy, communications, water/sanitation, health, education, solid waste collection and coastal/environmental protection.*	1. Road networks throughout the FSM providing reliable transportation network. 2. Efficient power generation and distribution with capacity that meet state requirements. 3. Water and waste systems with the capacity to meet current and projected demands for the FSM. 4. Well-maintained public services infrastructure (government administration buildings, health, education, utilities) providing uninterrupted and timely services. 5. Enhanced climate proofing of government infrastructure, including coastal protection improvements. 6. Communication networks providing effective and efficient services to the FSM.
SO#9.2: **Climate Resilient Infrastructure and Livelihoods** *The quality of life and access to economic opportunities in the remote communities and the outer islands of the FSM is enhanced through expanding access to climate-resilient infrastructure, sustainable livelihoods and services that focus on public buildings, connectivity, transportation, energy, clean water and environmental protection.*	1. Enhance the quality of life and access to opportunities for the citizens in the remote areas by improving infrastructure framework for maritime, air, water/sewage, solar and pedestrian facilities. 2. Expand ICT access to rural and marginalized population through extending broadband and Fiber-optic services, including expanding 4G/5G coverage to remote, rural, and previously unconnected areas, ensuring broad access to voice and data services to those who currently do not have access to services. 3. Improve rural community water systems through improvements to water catchment systems and make water lens use more efficient
SO#9.3: **Investment for Productive Economic Activities** *Increased opportunities for investment and productive economic activities, by expanding and upgrading economic infrastructure networks and facilities that meet the demands for sustainable development and economic diversification.*	1. Road networks with the capacity to enable private sector development including fisheries, agriculture, tourism, and manufacturing. 2. Access to increased resources and capacity development for small scale fisheries development and aquaculture 3. Renewable energy source capacity that is in line with the Energy Master Plan resulting in reduced costs of energy to businesses and households 4. Economic and capacity-based incentives designed that focus on the development of a viable FSM construction industry

Strategic Outcomes (SO)	Development Priorities
SO#9.4: **Institutional Framework (Regulation, Management Sustainability)** *An effective institutional framework for the regulation, management, and sustainability of infrastructure services, primarily in the areas of maritime transportation, infrastructure maintenance, the management of public utilities, environmental protection and conservation and natural resources management.*	1. Knowledge base for environmental management and climate change adaptation expanded. 2. Capacity development for transportation agencies enhanced. 3. Robust natural resources management. 4. Institutional and legislative frameworks resulting in liberalized public services where relevant. 5. Public/private partnerships supported through reductions in project mobilization costs.
SO#9.5: **Information Communication Technology (ICT)** *Support the transition to a digital economy, positioning the country as a leader in technological adoption and economic competitiveness by leveraging e-digital and ICT advancements to drive innovation across all sectors and improve public services.*	1. A seamless digital environment supported by a robust ICT infrastructure, integrating telecommunications and digital platforms supporting government services, businesses, and individuals. 2. Cybersecurity frameworks and policies that protect digital assets, safeguard public services, and maintain trust in digital infrastructure 3. Modernization of business and government Infrastructure through the development of secure, high-speed telecommunications infrastructure enabling the adoption of digital services, cloud computing, and data-driven innovation resulting in efficient and secure digital service delivery for public and private sectors 4. E-government platforms are available and accessible, allowing citizens to access essential services online, including healthcare, public safety and emergency communication networks. 5. Robust local capacity in managing, operating, and innovating within digital and telecommunications sectors, ensuring long-term sustainability and self-reliance. 6. Digital inclusion initiatives available ensuring equitable access to technology, digital literacy, and services for marginalized groups, including rural communities, women, and youth.

Source: FSM Draft Strategic Development Plan (Nov 2024)

Given the parallel schedules for the IDP and SDP production, it was not possible to align the multi-criteria analysis (MCA) and prioritization with the strategic outcomes above (refer Section 4.02). It is recommended that the MCA criteria be updated in 2025 to reflect the final infrastructure development priorities in the updated SDP (Table 11). Submitted project briefing notes should also clearly link development projects to these outcomes and priorities.

3.02 Delivery of the Previous Infrastructure Development Plan

The 2016 Infrastructure Development Plan achievements and challenges in implementation are identified to ensure that lessons learned are incorporated into the 2025 IDP.

The previous IDP was prepared by the Department of Transportation, Communications and Infrastructure (DTC&I) in consultation with the States of Chuuk, Kosrae, Pohnpei, and Yap and under the guidance of the FSM National IDP Steering Committee.

Table 12 presents a summary of the priority projects presented in the 2016 Chuuk Infrastructure Development Plan. Transportation had the largest number of projects, and the largest share of the cost at 49% of the total for air, maritime and roads. The road sector cost estimate was 35% of the total. The sectors with the second and third largest share of the cost were health and education. Chuuk had no projects coded as climate change resilience, government buildings or telecommunications. It is likely there were many more resilience projects that were coded as the primary sector (e.g. Maritime or Roads).

Table 12: Summary of 2016 Chuuk Infrastructure Development Plan

Sector	Count of Projects	Cost Estimate
Air Transportation	4	34.2m
Climate Change Resilience	0	-
Education	7	44.7m
Electric Power	4	7.8m
Government Buildings	0	-
Health	8	73.0m
Maritime Transportation	3	3.4m
Road and Pedestrian Facilities	7	92.9m
Solid Waste Management	1	3.5m
Telecommunications	0	-
Water/Wastewater Systems	1	7.0m
Grand Total	**35**	**266.5m**

Source: IDP Mainstream Report and Recommendations (March 2024)

During preparation of the IDP Mainstream Report and Recommendations (March 2024), the states were asked to review the 2016 IDP projects and report on their implementation status. Chuuk were able to report on the status of almost all of their 2016 IDP projects. Over 50% of Chuuk's projects were funded, including 11% completed and 41% ongoing. Only 11% of Chuuk's projects were unfunded, for an estimated cost of $54m (20% of the Chuuk IDP cost). The remaining projects were in the appraising stage (25%) or discarded (2%).

3.03 Creating the Long List

The IDP long list of agency identified infrastructure projects and programs was captured into a database, including the development needs and current commitments.

Consultation to Develop the Long List

To understand the pipeline of Chuuk State's infrastructure projects and programs, it was necessary to create a structured, central project database. Key attributes against each project in the long list are recorded in the project database (scope description, estimated cost, lead agency, status, type, likely funding source, timeframe, etc.). The database format is described in detail in Section 3 of the PDM.

The Chuuk State consultation workshop was held on 1 August 2024. The first draft long list was prepared by the Chuuk State Office of Planning (CSOP) ahead of this workshop. The workshop was attended by over 45 people from the 23 infrastructure agencies listed in Table 13.

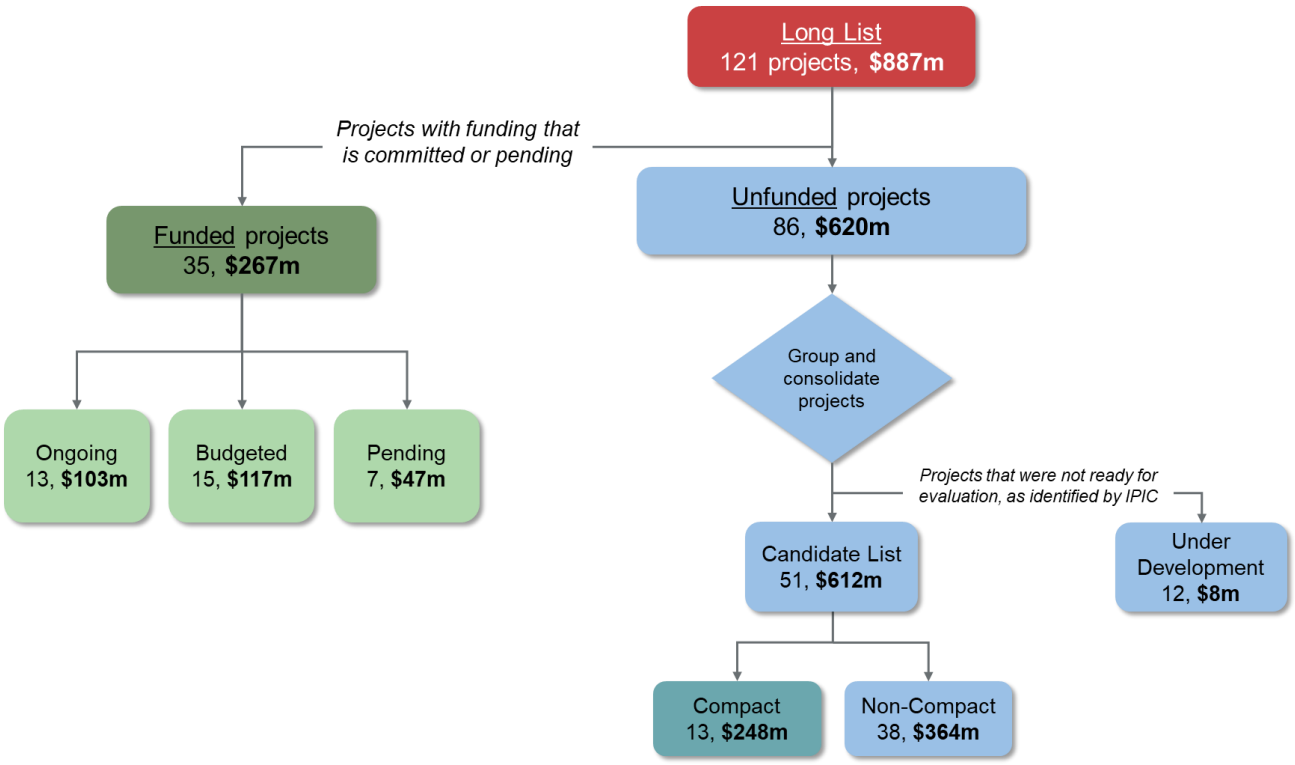

The workshop participants were provided an overview of the importance of infrastructure planning and prioritization, and the process for developing the 2025 IDP. The workshop also included an interactive session where the participants checked their agency's projects in the draft long list, added missing projects and completed key project attributes. The draft database from the first consultation workshop held over 120 projects from ten infrastructure sectors, including current projects that are ongoing, budgeted, or being appraised and those planned pipeline projects that would require funding within the next 10 years.

There were over **500 hours of consultation** spent with the infrastructure agencies listed in Table 13 to create the long list.

Assessment of Project Status

Following the first workshop, the project database was extensively reviewed to identify and complete missing information for key project attributes. The process for disaggregating the long list into funded (ongoing, budgeted or pending) and unfunded projects is shown in Figure 5.

Figure 5 : Analysis of the Long List

IPIC = Infrastructure planning and implementation committee. m = millions (US$).
Source: Authors

The project database of infrastructure development projects contains 124 projects, including three completed projects. The completed projects are not included in Figure 5.

The long list project costs are summarized by project status in Figure 6. The funded group of projects include those with status 'ongoing', 'budgeted' and 'pending'. The 'pending' status represents the "almost" funded projects that are in the final stages of securing funding. The funded group of projects covers 29% of the project count and 30% of the total cost of the long list. The unfunded group of projects include the projects with status 'appraising', 'evaluating', and 'pipeline'.

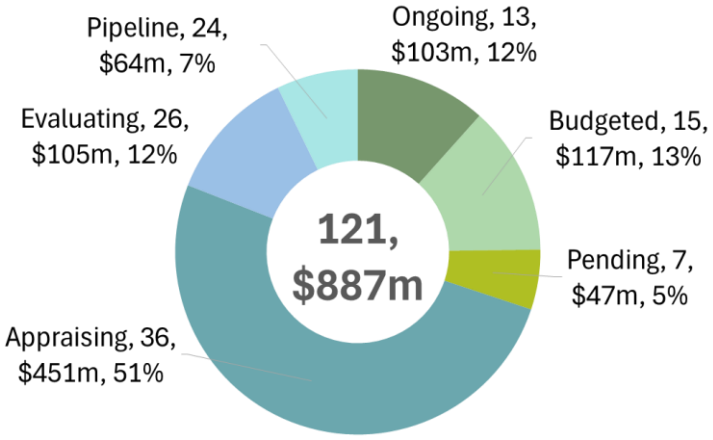

Figure 6 : Long List Project Costs by Project Status

Source: Analysis of Chuuk Project Database

The 'appraising' status includes projects have been screened and approved by the PMO and IPIC (past Gateway 1: Project Concept Approval, at the time of preparing the IDP) and will be included in the next budget round or are currently in discussions with development partners to seek funding.

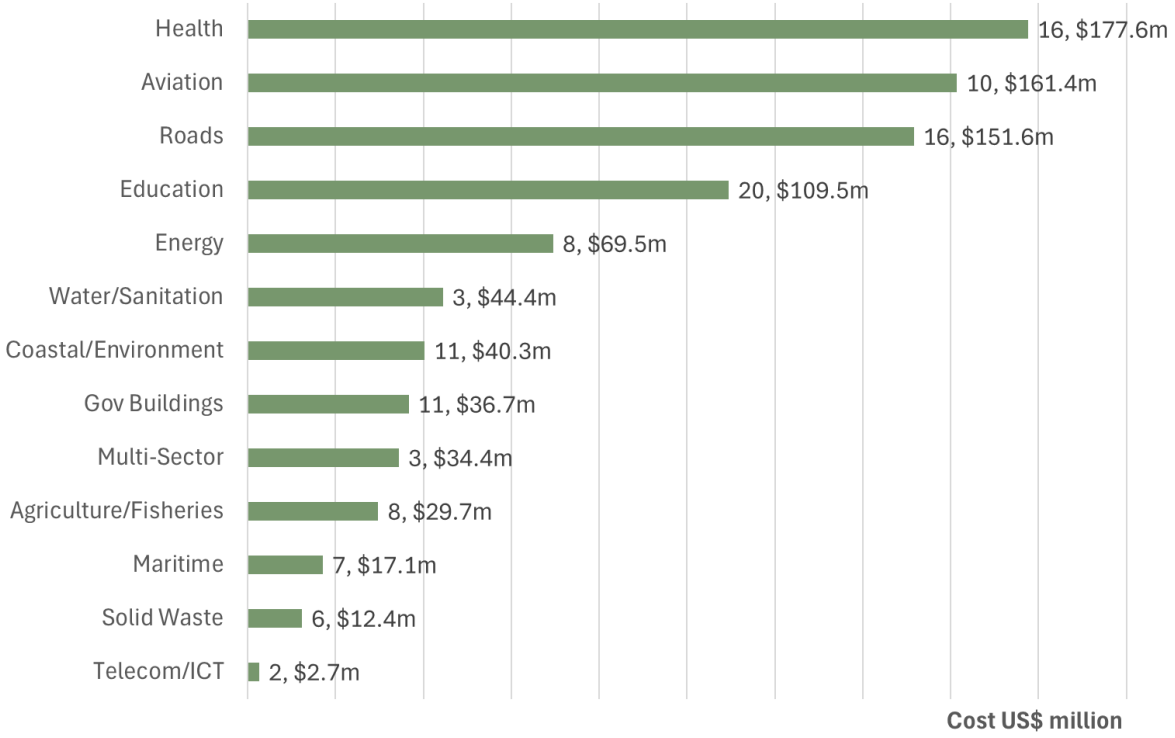

Table 14 shows a breakdown of the project database by the share of the estimated costs for each project status.

The funded projects represent the current commitments and are discussed further in Section 3.04. The process for identifying the candidate list from the unfunded projects is discussed in Section 4.01.

Summary of the Long List

The long list is summarized by infrastructure sector and estimated cost in Figure 7. The top five infrastructure sectors in descending order of estimated cost are Health, Aviation, Roads, Education and Energy. The sectors with the lowest share of the cost are Solid Waste and Telecom/ICT. These two sectors have only 7% of the projects in the long list, and less than 2% of the estimated cost.

Figure 7 : Summary of the Long List by Estimated Cost and Infrastructure Sector

Source: Analysis of Chuuk Project Database

Table 14 summarizes the long list under each lead entity by number of projects and cost estimate for the funded and unfunded categories. This summary shows that the PMO has the highest project cost and the highest cost of unfunded projects, followed by DOT, CPUC, and CSOP. The PMO also leads the most funded projects and CPUC has the highest cost of funded projects, followed by PMU and CSOP.

Table 13: Infrastructure Agencies Consulted With

Acronym	Entity Name
AG	Attorney-General's Office
C&I	Commerce and Industry (Division of the Chuuk State Government)
CGO	Chuuk Governor's Office
CPUC	Chuuk Public Utility Corporation
CSL	Chuuk State Legislature
CSOP	Chuuk State Office and Planning Office
CVB	Chuuk Visitor Bureau
DAS	Chuuk Department of Administrative Services
DEOC	Chuuk Disaster and Emergency Office of Coordination
DHS	Department of Health Services
DMR	Department of Marine Resources
DOA	Chuuk Department of Agriculture and Fisheries
DOE	Department of Education
DOT	Department of Transport within Division of Public Works and Transport
DPS	Department of Public Safety
EPA	Environmental Protection Agency
FSM-PMU	Program Management Unit of National DTC&I
FSMTC	FSM Telecommunications Corporation
LC	Land Commission
ODA	Office of Overseas Development Assistance
PMO	Project Management Office (Chuuk)

Ongoing Maintenance Liability for New Infrastructure

The long list is summarized in Figure 8 by estimated cost for each project type. New projects (including purchases and services) comprise 60% of the cost and 57% of the projects. Upgrade projects represent 38% of the cost, and 27% of the projects. Rehabilitation projects represent only 2% of the cost, and 16% of the projects. This is a healthy volume of rehabilitation and upgrade projects.

Figure 8 : Long List Project Costs by Project Type

m = millions.

Source: Analysis of Chuuk Project Database

A recent PRIF study into maintenance across the Pacific[1] outlines the importance of adequately budgeting and managing "whole-of-life" infrastructure costs to ensure the maximum potential life of infrastructure. The study identified that the capital cost of building infrastructure in pacific island countries is only **one-fifth** of the **total whole-of-life cost** of owning the infrastructure over its lifetime.
To achieve an asset's "design life", managers need to adhere to the manufacturers' recommended maintenance regime or accepted best practice. When maintenance regimes are not followed, assets will fail to meet service standards (for example, pumping capacity, in-service hours) and thus need replacement before their design life has been realised.

"Capital maintenance" in the form of a rehabilitation or refurbishment (for example road resealing) can restore the service potential of an asset and extend its life beyond its original design life. Infrastructure entities are encouraged to increase their planned capital maintenance work to extend the service life of infrastructure assets to achieve lower whole-of-life costs.

A very broad and conservative assumption for the ongoing operation and maintenance cost liability from new infrastructure is 4-6% per year. If all of the new capital infrastructure projects in the database were constructed for $509m, the operation and maintenance liability for these assets would be **over $20-30million per year**.

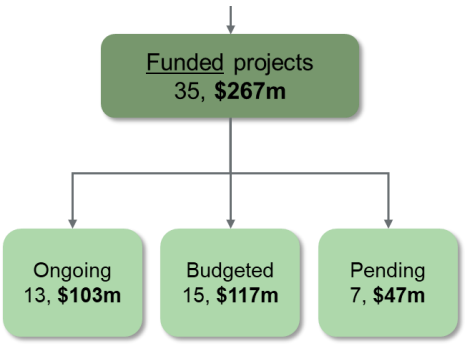

The Infrastructure Maintenance Fund (IMF) sets a budget of 7% of the capital investment levels to cover this ongoing liability. However, the IMF can only be used for the purpose of repair and maintenance of US funded infrastructure. To access IMF annual grant funding, the state and national government submit a "Consolidated Infrastructure Maintenance Plan" to the Government of the US. The FSM Government is also able to contribute to the IMF.

Infrastructure agencies are encouraged to consider the funds required to operate, maintain and rehabilitate their infrastructure portfolio, especially where new infrastructure is funded by a development partner outside of the US.

[1] Pacific Infrastructure Maintenance Benchmarking Report: 2021 Baseline Assessment (PRIF 2021)

3.04 Current Project Commitments

The current commitments of funded ongoing, budgeted and pending projects are presented separately from the unfunded future infrastructure development needs (Section IV).

The cost of the current commitments for funded ongoing, budgeted and pending projects is $267million. The funded projects represent 29% of the project long list and 30% of the total estimated cost.

The current Compact commitments include investments in aviation, education, health, and roads infrastructure:

- Design of the Chuuk International Airport runway extension and new airport terminal.
- New construction and renovations of 13 elementary and high schools.
- Design of the new Chuuk hospital.
- New construction of seven dispensaries.
- Upgrade of the Mormon Church to Blue Lagoon to Wichap primary road (co-financing with ADB).

The non-Compact development partner projects include investments in fisheries, aviation, energy, government buildings, roads, solid waste, telecom/ICT and water/sanitation.

Table 15 presents summary details for the $103m of ongoing projects. Table 16 presents summary details for the $164m of budgeted and pending projects.

Chuuk is expanding renewable energy with development partner support.

Table 15 : Ongoing Project Commitments

Section IV.

Priority Projects

This section of the development plan describes the multi-criteria analysis and decision-making framework that has been used to assess the relative impact (benefits) delivered by projects in the 10-year pipeline and aid in determining the priority projects for further development. The multi-criteria in the framework include alignment with the strategic priorities, and assessment of effort and impact. The final step in the decision-making framework was a group ranking of the candidate projects by IPIC using the MoSCoW prioritization process to identify the state's priority projects.

Contents of this Section:

IIII.1 Candidate List for Screening

IIII.2 Alignment with Strategic Development Plan

IIII.3 Priority Matrix

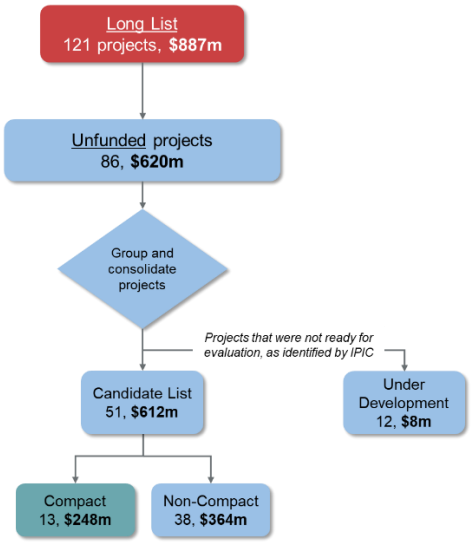

IIII.4 Group Prioritization

Improving Lagoon island docks and sea walls to improve connectivity is a priority for Chuuk State.

4.01 Candidate List for Screening

The unfunded infrastructure projects were reviewed to identify those that are investment ready and have sufficient information to proceed to the next step of screening through the Multi Criteria Analysis. Where practical, packages of similar projects were grouped into a program.

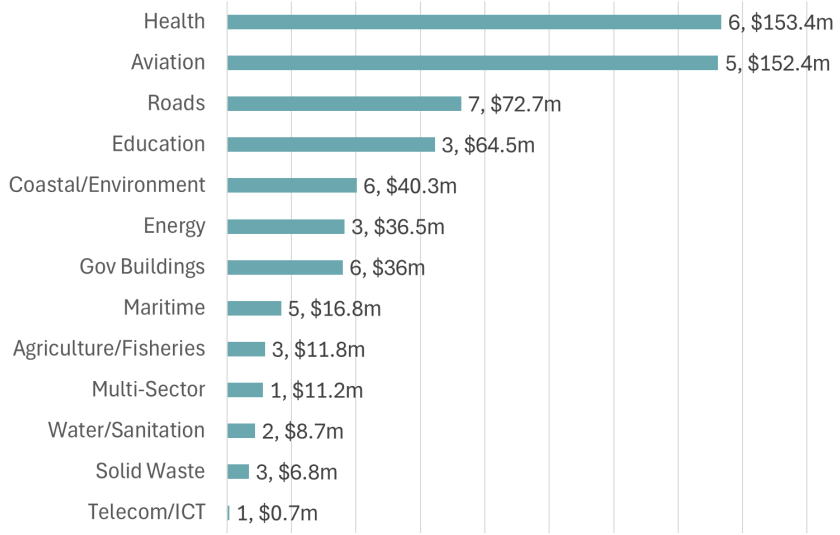

The starting point for identifying the candidate list of infrastructure projects is the unfunded projects from the long list. The 86 unfunded projects (projects with status appraising, evaluating, and pipeline) represent 71% of the projects and 70% of the total estimated cost.

The draft candidate list was selected from the unfunded projects by identifying all projects that were a priority for the state and investment ready (typically project status of either appraising or evaluating). Sector coverage was also taken into consideration. The priority unfunded projects were identified by the Chuuk State Office of Planning (CSOP) and/or presented by CSOP to the Development Partner Roundtable held on 15 August 2024. Similar projects were grouped into a program where practical and particularly for smaller projects with cost estimates under $1m. Examples include a school renovation program and an agriculture facilities improvement program.

The draft candidate list was presented to the IPIC at the second IDP consultation workshop held on 27 September 2024 in Chuuk State. During this workshop the attendees reviewed the draft candidate list, made changes to the included projects and updated key attributes including the project status.

Figure 10 summarizes the candidate list by sector. The sectors with the largest share of the project costs are health, aviation roads, and education.

Figure 10 : Candidate List Summarized by Infrastructure Sector

m = millions (US$).

Source: Analysis of Chuuk Project Database.

Candidate Project List

The finalized list of 51 candidate projects for screening is presented below. The total estimated cost is $612m. Programs are groups of similar projects, and the number of projects included in a program are shown in the brackets.

- AF1: Agriculture Facilities Program (3 projects), $1.45m
- AF2: Chuuk Fishing Coop Facility, $0.35m
- AF3: Uman Seawall and Pad, $10m
- AV1: Cargo Storage Facility, $2m
- AV2: Outer Island Airstrip Improvements, $3.85m
- AV3: Chuuk International Airport Runway Extension Construction, $80m
- AV4: New Airport Terminal Building and Carpark Construction, $66m
- AV5: Chuuk Airport Runway New Oceanside Fence, $0.9m
- CE1: Weno Climate Resilient Shoreline, $1.49m
- CE2: Typhoon-Proof Shelters , $1.41m
- CE3: Weno Shoreline Protection, $2m
- CE4: Environmental Protection Agency Office Renovation, $0.35m
- CE5: Resilient Lagoon Docks and Seawall Program Group 1 (6 projects), $30m
- CE6: Resilient Lagoon Docks and Seawall Program Group 2 (PPO Dock), $5m
- ED1: School Improvement Program - Phase 2 (10 elementary schools), $63m
- ED2: New Chuuk Public Library, $0.45m
- ED3: Vocational and Work Force New Buildings Program (2 projects), $1m
- EN1: Household Internal Wiring, $2m
- EN2: New Office for CPUC and Association of Micronesian Utilities (AMU), $3m
- EN3: Chuuk Outer Islands Electrification Program, $31.5m
- GB1: Sports Complex, $30m
- GB2: Government Complex Upgrade Program (2 projects), $0.9m
- GB3: Jailhouse Rehabilitation, $2.6m
- GB4: New Tourism Cultural Center and Tourism Sites, $1.05m
- GB5: Government Building Renovation Program (2 projects), $0.8m
- GB6: Land Management Court, $0.6m
- HE1: Construction of New Chuuk Hospital, $135m
- HE2: Health Services Incinerator Facility (Health Renovation Program (HRP) Phase 2), $0.23m
- HE3: DHS Medical Support Ship, $0.9m
- HE4: Public Health Two-storey Building (HRP Phase 2), $0.6m
- HE5: Outer Island Dispensaries Program - 13 locations (Health Improvement Program), $15.6m
- HE6: Outer Island Dispensaries Program - Onoun (HIP Phase 2), $1.1m
- MA1: Chuuk Lagoon Island Sea-Port Development - Five Priority Sites, $15m
- MA2: Centralized Fuel Center/Boat Pull Area, $0.5m
- MA3: Chuuk Fresh Tuna Incorporated (CFTI) Rehabilitation, $0.75m
- MA4: Chuuk State Muti-Role Vessel Feasibility Study, $0.5m
- MA5: Weno Commercial Port Improvements *($15m included in national IDP)*
- MS1: Climate-Proofing Infrastructure, $11.19m
- RD1: Epinup to Sapuk Primary Road Extension on Weno, $14.9m

- RD2: Fefan Island Circumferential Road (Lagoon Islands), $30m
- RD3: Sapuk Circumferential Primary Road on Weno, $6m
- RD4: Uman Island Pedestrian Road (Lagoon Islands), $4.38m
- RD5: Wichap to Epinup Primary Road on Weno, $6m
- RD6: Tol and Onei Pedestrian Roads (Lagoon Islands), $5.4m
- RD7: Neauo Dumpsite Road, $6m
- SW3: Oneisom Solid Waste Management Facility, $1.65m
- SW4: Tonoas Solid Waste Management Facility, $1.65m
- SW6: Weno Solid Waste Management Facility, $3.5m
- TC1: Fiber Optic Cable Conduits, $0.65m
- WS1: Weno Water and Sanitation Upgrade, $3m
- WS2: Outer Island Water Supply Improvements, $5.7m.

Projects Under Development (not included)

There were 12 pipeline projects still under development at time of writing IDP, with a total estimated cost is $8m. These projects will continue to be reviewed during IPIC's annual update of the priority lists.

- F11: New Cold Storage Facilities, $4.3m
- F18: Marine Resources/Public Market Rehabilitation, $0.8m
- A17: Airport Rescue and Firefighting Rehabilitation/Water Tanks, $0.3m
- B11: New Administrative Building, $0.5m
- H13: DHS Roofing Replacement, $0.6m
- H14: DHS Administrative Rehabilitation, $0.4m
- H16: DHS Morgue Facility Rehabilitation, $0.1m
- H18: DHS Sterilization Room Rehabilitation, $0.1m
- H19: Rehabilitate DHS Storage Facility, $0.2m
- H20: DHS Surgical Ward Rehabilitation, $0.6m
- M12: Commercial Port 'TRANSCO' Warehouse, $0.4m
- M16: Rehabilitate Commercial Port Rehabilitation, $Unknown.

4.02 Multi Criteria Analysis

The candidate list was used as the basis for projects to undergo the Multi-Criteria Analysis (MCA). The purpose of undertaking the MCA was to provide structure and transparency to the prioritization of the candidate projects.

Determine Criteria

To establish the criteria for the Multi-Criteria Analysis (MCA), the Strategic Priorities from the SDP 2004-2023 were used as a foundation. Metrics were determined for each criterion, and weights were assigned according to their relative importance. A pilot test was conducted to refine these criteria, ensuring they were practical and effective. As a result, clearly defined and documented evaluation standards that align with our long-term goals were developed. The MCA process is described fully in the accompanying **Project Development Manual**.

Score the Alternatives

Projects were scored using the established criteria from the MCA. Each project was assessed based on the defined metrics for strategic goals, impact, and effort. Scores for each criterion were assigned on a scale of 1-5 according to these metrics. The weighted scores for each criterion were then summed to generate a total score for each project, providing a comprehensive overview of each project's performance relative to the criteria.

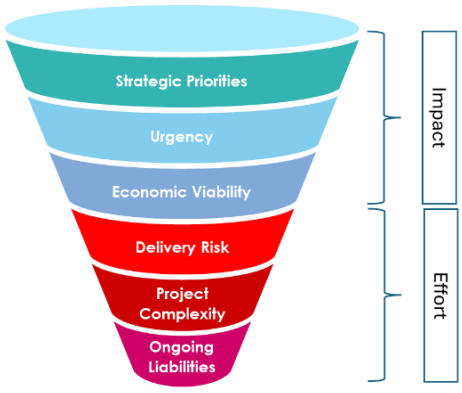

Ranking the Alternatives

All projects were listed in a spreadsheet with their corresponding total scores. The projects are then sorted in descending order based on their total scores. This means the project with the highest total score appeared at the top of the list. The preliminary rankings were reviewed to ensure there were no errors in scoring or data entry. This list was used to assist the members in the final prioritization exercise as outlined in Section 4.04.

Table 18 outlines the results of the MCA scoring by the PRIF consulting team compiling the IDP. The centralized scoring ensured that there was consistency and objectivity in approach to rating the projects.

For the combined (ranking) score, a 70% weighting was assigned to the 'effort' associated with the project, while a 30% weighting was given to the 'impact' the project would have. While both effort and impact were considered in the analysis, the effort required to complete the project was deemed more significant in the overall scoring, thus receiving a higher percentage of the total score.

Figure 11 : MCA Process

Source: Project Development Manual

Table 18: MCA Results

ID	Project/Program	Cost ($m)*	Impact	Effort	Combined Score
AV5	Chuuk Airport Runway New Oceanside Fence	0.9	High	Low	3.7

GB6	Land Management Court	0.9			

AMU = Association of Micronesian Utilities, CFTI = Chuuk Fresh Tuna Incorporated, CPUC = Chuuk Public Utilities Corporation, DHS = Department of Health Services, EPA = Environmental Protection Agency, HIP = Health Improvement Program, HRP = Health Renovation Program, m = millions (US$).

Notes:
** Budget estimate at time of writing IDP. Actual figures are updated and maintained by CSOP and IPIC.*
The number of projects included in a program are shown in the brackets.

MA5: Weno Commercial Port Improvements project cost estimate is included in the national IDP.

GB6 was added to the candidate list following the completion of the MCA process.

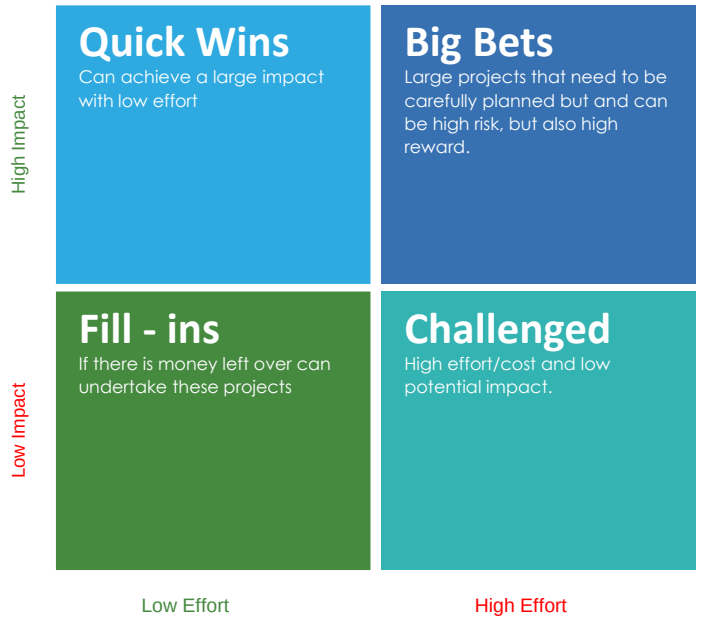

Source: Analysis of Chuuk Project Database.

4.03
Priority Matrix

The results of the MCA were presented on an impact-effort matrix to categorise the candidate projects into four quadrants, each with a unique strategic characteristic. This provided a starting point for project prioritization..

The results of the MCA can be presented on an impact-effort matrix to categorise the projects into four quadrants to assist with project prioritization. This approach optimizes resource allocation by focusing on "quick wins" while carefully weighing the prospects of "big bets". The matrix plots the effort to undertake the project (x-axis) against the impact (y-axis) the project will have. Each quadrant reflects a unique strategic characteristic as shown in Figure 12.

Figure 12 : Impact-Effort Matrix and the Four Quadrants

Source: Adapted from "Action Priority Matrix: Identify the right opportunities to pursue, Think Insights"
https://thinkinsights.net/consulting/action-priority-matrix/

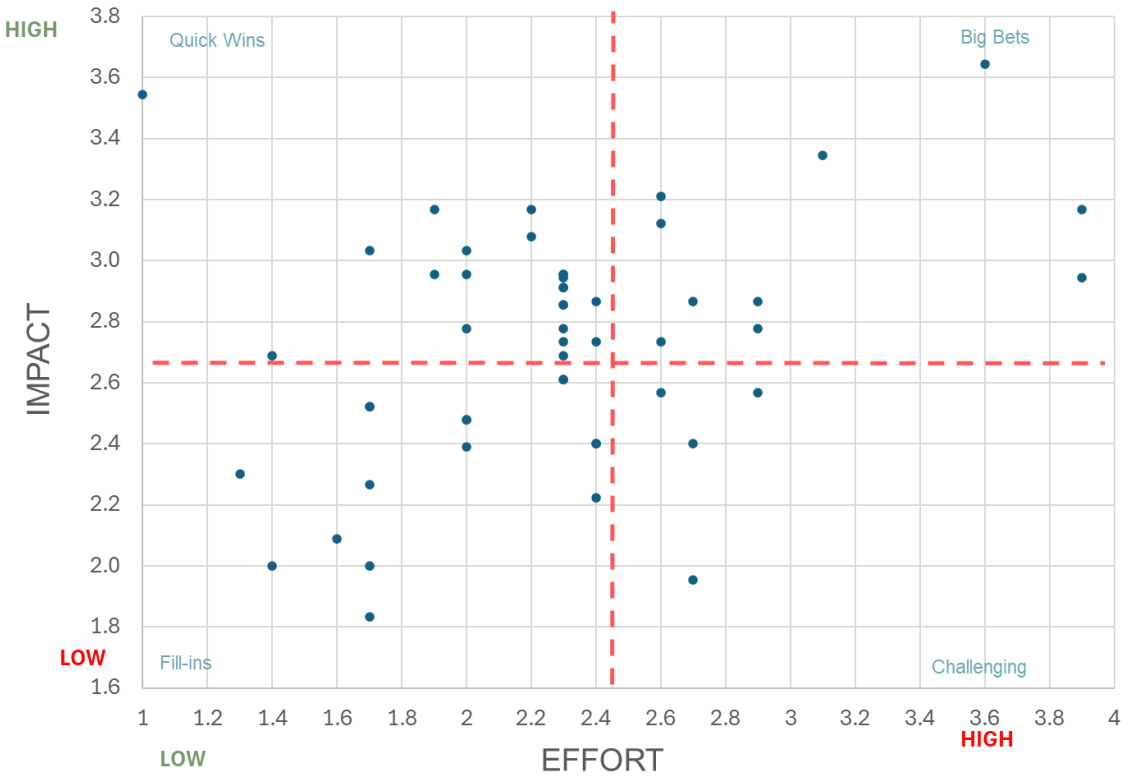

The four quadrants can be further described as:

1. **Quick Wins (upper-left quadrant):** Projects in this quadrant are characterised by high impact and low effort. They are expected to provide significant benefits with relatively low investment of time and resources as well as minimal delivery risks. As such, these projects should receive foremost priority given their potential to deliver substantial benefits quickly.
2. **Big Bets (upper-right quadrant):** These projects are deemed to have high impact but also high effort to deliver. It is acknowledged that these projects offer considerable benefits but also at high cost/risk. Hence, careful planning is required to ensure benefits can be realised while effectively managing risks.

3. **Fill-ins (lower-left quadrant):** These projects feature low impact and low effort. While these may not deliver significant benefits, their ease of execution and ability to address smaller, yet important, infrastructural needs justify keeping them on the priority list if there is time and resources available.
4. **Challenged (lower-right quadrant):** Projects positioned in this quadrant are those deemed to have low impact while still requiring significant effort to deliver. Due to the disproportionate delivery effort required relative to meagre benefits received, these projects require careful scrutiny and may be deferred, reassessed, or eliminated from consideration in the current phase to allow for greater focus to be placed on more impactful and viable projects.

Figure 13 shows the MCA results for the Chuuk priority projects and how these projects align with the four quadrants of the impact-effort matrix. This diagram shows that most of the Chuuk priority projects are categorized as quick wins and fill-ins, and big bets, with only four projects in the "challenging" category. The approach of categorizing the projects this way helps to optimize resource allocation by focusing on "quick wins" while carefully weighing the prospects of "big bets" as priorities.

Figure 13 : Representation of MCA Results in the Impact-Effort Matrix

Source: Analysis of Chuuk MCA results

4.04 Group Prioritization

The MCA and the impact-effort matrix formed a starting point for the prioritization of projects; however these do not show the full picture including project dependencies, readiness and political drivers. Therefore, a further prioritization exercise was undertaken whereby members of the IPIC prioritized the projects using the MoSCoW method.

The results of the MCA and the impact-effort priority matrix were provided to the IPIC members during the second consultation workshop on 24 September 2024. The purpose of this workshop was to facilitate the final prioritization of the projects given the group's collective insights and local knowledge. As highlighted, the MCA and the impact-effort priority matrix do not present the full picture, as crucial elements such as project dependencies, readiness, and political drivers are omitted. Addressing these elements requires an understanding of the local context.

IPIC Prioritization Process

There are many methods to facilitate group committee prioritization of projects/initiatives. Given the large size of the list of projects to be prioritized, the group prioritization exercise was undertaken using the MoSCoW Method. MoSCoW is an acronym which stands for four prioritization categories:

- "Must have" – represents essential projects that are critical to the nation's infrastructure needs and therefore must be addressed first.
- "Should have" – represents projects that are important but are not essential. These should be addressed if possible.
- "Could have" – represent projects that are desirable and would be beneficial to the infrastructure plan if time and resources permit.
- "Won't have" – represents projects that are agreed to be deferred or excluded in the current phase. These projects may be difficult to justify given higher priority projects.

To further support the effectiveness of the prioritization exercise, certain controls were included to limit the number of projects that could be allocated to each category. Namely, each member was given up to 50 votes (the total number of candidate projects) and was allowed no more than 18 projects in any band (MSCW). This encourages focused decision-making, avoiding large concentration in any one category, and enabling prioritization of the most critical and impactful projects while effectively managing resources and expectations.

IPIC Priority Projects for Compact Funding

The IPIC priority projects identified for Compact funding are outlined in Table 19. The largest project is project HE1 to construct the new Chuuk hospital. This will be funded by the remaining balance of Compact II carry-over and then Compact III. The IPIC priority road projects on Weno were identified for co-funding by Compact and development partners and are summarized in Table 20.

The Compact III allocation for Chuuk State is $133 million over the next ten years (Section 2.02). The total cost of the priority projects for Compact funding in Table 19 is estimated to be $221 million, although an estimated $35m of the hospital construction cost may be funded by Compact II. In addition, the road projects for co-funding in Table 20 have a total estimated cost of approximately $27 million. Co-funding the road projects with development partners will reduce the funding sought from Compact.

These projects match the Compact funding priorities presented in Section 2.02. The year for each project is the indicative year that the project will be investment ready. The start year will be subject to approval of Compact funding by JEMCO through the annual process of approving the infrastructure sector's AIP.

Table 19 : IPIC Priority Projects for Compact Funding

ID	Lead	Type	Project/Program	Cost ($m)*	Year
ED1	PMO	New	School Improvement Program - Phase 2 (10)	63.0	2025
EN2	CPUC	New	New Office for CPUC and AMU	3.0	2025
GB4	CSOP	New	New Tourism Cultural Center and Sites (2)	1.1	2026
GB5	CSOP	Rehabilitate	Government Building Renovation Program (2)	0.8	2025
HE1	PMO	New	Construction of New Chuuk Hospital	135.0	2026
HE2	DHS	New	Health Services Incinerator Facility (HRP Phase 2)	0.2	2026
HE3	DHS	New	DHS Medical Support Ship	0.9	2025
HE4	DHS	New	Public Health Two-storey Building (HRP Phase 2)	0.6	2025
HE5	DHS	New	Outer Island Dispensaries Program - 13 (HIP Phase 2)	15.6	2025
HE6	DHS	New	Outer Island Dispensaries Program - Onoun (HIP Phase 2)	1.1	2026
			Total	**221.3**	

Notes: Refer to Table 12 for Lead Agency abbreviations. AMU = Association of Micronesian Utilities, DHS = Department of Health Services, HIP = Health Improvement Program, HRP = Health Renovation Program, m = millions (US$).
** Budget estimate at time of writing IDP. Actual figures are updated and maintained by CSOP and IPIC.*
The number of projects included in a program are shown in the brackets

Appendix A contains project briefing notes for the priority projects for Compact funding and co-funding identified in Table 19 and Table 20.

IPIC Priority Projects for Development Partner Funding

Table 21 below shows the priority projects that are deemed ready to seek funding from development partners. The cost estimate for MA5: Weno Commercial Port Improvements is included in the national IDP, under the proposed Transport Infrastructure Project seeking funding from World Bank.

The total amount of $364 million is below the indicative funding threshold of $440 million presented in Section 2.04. The IPIC priority road projects on Weno have a total cost estimate of $27 million and may be co-funded by Compact and development partners. This means that there is a little headroom for new projects to be added to the priority list during IPIC's annual review process. However, new projects may be added, and the prioritisation of projects may change.

All projects in the candidate list are deemed to be IPIC priority projects and ready to seek funding. There are no secondary/P2 projects.

Table 21 : IPIC Priority Projects for Development Partner Funding

ID	Lead	Type	Project/Program	Cost ($m)*
AF1	DOA	New	Agriculture Facilities Program (3)	1.5
AF2	DOMR	Rehabilitate	Chuuk Fishing Coop Facility	0.4
AF3	DOA & DEOC	New	Uman Seawall and Pad	10.0

Section V.

Funding Strategy

Accessing funding for development partner funded projects involves planning, coordination, and alignment with the strategic goals of the projects and the development partners' objectives. This section outlines a structured approach to developing such a strategy: It covers the magnitude of likely finding needed over the next ten years based on the prioritized list of projects, as well as key development partner themes, eligibility criteria and funding cycles.

Contents of this Section:

V.1 Funding Requirements

V.2 Key Development Themes

V.3 Addition of Projects to the Priority List

Solid waste is a challenge throughout the Pacific, especially the safe disposal of abandoned and wrecked vehicles.

5.01 Funding Requirements

The IDP captures the pipeline of agency identified shortlisted projects for investment. These projects require funding, and this section explores the likely funding requirements for these projects.

Development Partner Roundtable

The second FSM Development Partners Roundtable was held on 15 August 2024 with the purpose of achieving a shared understanding of state and national priorities and strengthening collaboration among stakeholders. The FSM delegation of state and national leaders presented at the morning sessions on their state level and national priorities including economy and infrastructure; social development; environment; and good governance.

Development and implementing partners presented at the afternoon sessions on their development frameworks and project overviews including Australia; Canada (virtual); the Peoples' Republic of China; European Union; Japan; US; WBG; ADB; United Nations Resident Coordinator's Office representing all relevant UN agencies; International Organisation for Migration; and the Pacific Community. Key discussions included possible ways forward on ODA priorities, noting bilateral and multilateral "trends of assistance" and state-specific needs and concerns.

Chuuk State presented during the morning session under the FSM Pave the Nations program theme and highlighted their urgently need to pave roads, particularly in Weno, where 13 miles remain unpaved. The state aims to create a safer environment, promote gender equality, and improve access to essential services, aligning with strategic development goals. The Chuuk State Planning Office is leading these efforts but seeks capacity building and funding assistance. Infrastructure improvements are essential for economic opportunities, reducing out-migration, and increasing student attendance.

The Department of Transportation, Communication, and Infrastructure presented three programs under the national priority of "climate resilient infrastructure for outer island transport", including two programs for Chuuk State: Chuuk Lagoon Island Sea-Port Development; Strengthening the Lifeline Access for Outer Island Communities. The need for upgrades to outer island docks and airports was also ?????, with a study recently completed on ferry service in the Chuuk Lagoon.

Chuuk State also presented under the session on access to renewable energy and water security. Only 30% of the state population and the current projection is to electrify fifteen islands by 2025 with the remaining electrified by 2027.

5.02 Evaluation of Development Themes for Funding

Identifying key development partner themes and priorities is crucial to ensure that the IDP aligns with both the strategic development goals of the state and the expectations of key development partners. By clearly identifying these key themes and priorities, the IDP can strategically target resources, foster inclusive growth, and achieve lasting developmental impact.

Asian Development Bank (ADB)

ADB's support to FSM has largely been focused (i) reducing energy costs by increasing the supply of renewables; (ii) managing risks by improving disaster risk financing and public financial management; and (iii) creating value by delivering safe water and sanitation services, strengthening human capacity, supporting private sector development, and improving accessibility through climate-resilient roads and bridges.

In 2021, ADB published *The Pacific Approach 2021-2025*, which serves as ADB's operational framework in the Pacific region. Under this, the three key objectives to address the challenges of Pacific Small Island Developing States (SIDS) are (i) preparing for and responding to shocks, (ii) delivering sustainable services, and (iii) supporting inclusive growth (Table 22). These objectives are interconnected and leverage the One ADB approach, utilising internal and partner resources to comprehensively tackle development challenges in the region.

Table 22: Overview of ADB's support under the Pacific Approach, 2021 – 2025

Objective	Priority Areas
Preparing for and Responding to Shocks	Public financial management
	Strengthening of debt management capacity
	Health: surveillance, information systems, health system engineering
	Economic recovery: policy dialogue and infrastructure investments
	Disaster risk reduction
Delivering Sustainable Services	Sustainable Energy
	Connectivity, ICT, and intermodal transport
	Urban development, water supply, sanitation, solid waste management, and urban flood management
	State-owned enterprise reform
Supporting Inclusive Growth	Inclusive private sector growth: MSMEs, access to finance, and improvement of investment environment
	Education and digital learning tools
	Social protection

ICT = Information and communication technology. MSME = Micro, Small, and Medium Enterprises.

Source: The Pacific Approach 2021-2025. (2021)

World Bank

The World Bank's support to the Federated States of Micronesia (FSM) is focused on addressing a range of interconnected global challenges. Central to these efforts is the goal of ending extreme poverty by 2030, boosting shared prosperity, and achieving more equitable societies. Emphasising inclusion, the World Bank aims to enhance the distribution of opportunities, resources, and choices for all, particularly for women, youth, and marginalised communities, with a special focus on human development areas such as education, health, and social protection. Additionally, the World Bank aims to build resilience, helping people and countries prevent, prepare for, and recover from shocks like climate and biodiversity crises, pandemics, and conflicts. Sustainability is another vital theme, with actions directed towards promoting economic growth, job creation, macroeconomic stability, prudent fiscal and debt management, food security, and access to clean air, water, and affordable energy.

US Agency for International Development (USAID)

USAID's programs in the FSM address environment and climate change, disaster preparedness, fisheries, health, and democracy and governance, working closely with government organisations, NGOs, multilateral agencies, and the private sector to achieve shared development goals. In its 2022-2027 Strategic Framework for the Pacific Islands, USID identified three key Development Objectives, with a particular emphasis on Resilience.

These are firstly *Community Resilience Strengthened*, which focuses on increasing resilience by adapting to climate change, sustainably managing natural resources, and improving access to clean, sustainable energy. This also includes strengthening health systems to improve COVID-19 response and enhance the delivery of health care to withstand future shocks. Secondly, *Resilient Economic Growth Advanced*, which promotes post-COVID economic recovery through sustainable development practises. Thirdly, *Democratic Governance Strengthened*, which aims to enhance democracy, human rights, and governance, and support conflict mitigation in fragile areas.

Department of Foreign Affairs and Trade, Australia (DFAT)

Australia's priorities within FSM involve supporting education, the environment and oceans, COVID-19 recovery, and women's social and economic empowerment. Australia also focuses on enhancing regional connectivity, linking the North and Central Pacific to each other and Australia. Looking forward, DFAT places an emphasis on projects that aim to meet genuine needs and deliver long-term benefits.

DFAT aligns its efforts with several key Sustainable Development Goals (SDGs) including:

- SDG 3 – Good health and well-being
- SDG 4 – Quality education
- SDG 5 – Gender equality
- SDG 6 – Clean water and sanitation
- SDG 8 – Decent work and economic growth
- SDG 9 – Industry, innovation, and infrastructure
- SDG 14 – Life below water
- SDG 16 – Peace, justice and strong institutions

European Union (EU)

The European Union shares a common ambition with the Pacific of achieving a low carbon and resilient future by 2050. Achieving this requires comprehensive actions across a wide range of sectors and policies, public and private investments, as well as the creation of incentives for governments, local communities, and the private sector to address the climate, environmental, economic, and democratic challenges of the Pacific region. To this end, the Pacific Multi-Country (MIP) will focus EU support in the Pacific for the period 2021-2027 on three priority areas (Table 23).

Table 23: Overview of European Union Priority Areas

Priority Areas	Priority Sectors	Specific Objectives
Climate Action and Environmental Sustainability	Climate Action Adaptation, Resilience and Recovery Environmental protection and Sustainable Management of Natural Resources	• Support climate mitigation efforts, reduce GHG emissions, and support achievement of international commitments under the Paris Agreement • Support climate adaptation, resilience to natural disasters, disaster recovery, and achievement of international commitments under the Paris Agreement and Sendai framework • Support biodiversity conservation and management of protected areas • Promote strengthening ocean governance, including conservation and sustainable management and use of living marine resources
Inclusive and Sustainable Economic Development	Sustainable Green & Blue Economy Economic Governance	• Support diversified, sustainable and resilient economic growth, in particular by strengthening the role of MSMEs and supporting local livelihoods through diversification of the economy • Improve economic governance, including budget transparency and accountability, ensuring macroeconomic and fiscal policies and PFM reforms are aligned to achieving climate objectives
Fundamental Values, Human Development, Peace and Security	Strengthening of Democratic Institutions, the Rule of Law and Protection of Human Rights Mainstreaming Gender and Addressing Violence against Women and Children.	• Strengthen the functioning of democratic institutions, electoral processes, access to justice, the rule of law, and protection of human rights • Mainstream gender across all priority area and tackle the widespread problem of violence against women and children

GHG = Greenhouse gases, MSME = Micro, Small, and Medium Enterprises, PFM – Public Financial Management.

Source: Pacific Multi Country: Multi Annual Indicative Programme 2021-2027. (2021)

United Nations Development Programme (UNDP)

In 2022, UNDP launched the Multi-Country Programme Document (MCPD) to guide its development efforts in Fiji and Samoa, addressing the national priorities of 14 countries and territories from 2023-2027. This plan aligns with the United Nations Sustainable Development Cooperation Framework and focuses on three outcome areas: 'Prosperity,' 'Planet,' and 'Peace.'

Under *Planet*, UNDP will support Pacific Island Countries and Territories in enhancing and implementing their nationally determined contributions under the Paris Agreement. This includes addressing critical climate security challenges, promoting low-carbon renewable energy, and enhancing energy efficiency through policies, sustainable transport initiatives, local expert training, and

financial incentives. UNDP will also strengthen disaster risk reduction and climate change adaptation through institutional support and risk-informed planning.

For *Prosperity*, UNDP will assist national governments in creating policies and regulations that support small and medium enterprises, particularly within the blue-green and circular economies, and those owned by women and youth. Under *Peace*, UNDP will enhance innovative approaches such as digital transformation and South-South cooperation to improve public service provision and budget transparency.

Green Climate Fund (GCF)

The GCF is the largest climate fund in the world and has the largest capacity building program for climate finance access. The FSM-GCF partnership began in 2016 to pursue a transformational climate action agenda that would see FSM meeting their international contributions to the United Nations Framework Convention on Climate Change sustainable development and climate goals. The Secretary of the FSM Department of Finance & Administration is the FSM's National Designated Authority to the GCF. In recognizing the greater impact of a paradigm-level and systemic approach to address the double challenge of sustainable development and climate change, the FSM has developed a robust Country Program with the Fund. The Country Program is underpinned by the FSM's Sustainable Development Strategic Framework and Vision of 'safe and resilient communities prospering in a low carbon economy'. The framework not only aligns with FSM's Nationally Determined Contributions and the SDGs, but importantly underscores the global significance of the FSM as a 'Large Ocean State in the Blue Pacific Continent', making the FSM one of the few places on earth uniquely positioned to protect, restore and expand natural carbon-sequestering ecosystems.

As 'climate custodians', FSM's partnership with the GCF is of great importance as it supports FSM communities to carve out a development pathway built not only with quality, resilient infrastructure but also one that can thrive within a country-wide infrastructure system built for resilience. The FSM-GCF Country Program (2024-2027) pipeline of projects are infrastructure in nature and are being developed through a prioritization process that draws from the endorsed priorities listed in the IDPs, the Joint State Action Plans and the ODA Priorities.

Japan International Cooperation Agency (JICA)

Under its country assistance policy for the Federated States of Micronesia (FSM), the Japan International Cooperation Agency (JICA) focuses on two main priorities. The first priority is overcoming vulnerability, which involves supporting infrastructure development, particularly in maritime affairs, as well as improving health and education, with a focus on agriculture and fisheries. The second priority is promoting sustainable economic growth, which aims to enhance economic infrastructure and improve the business environment to stimulate economic activities and development.

China

The Economic and Technical Cooperation Agreement is China's main instrument for providing bilateral grant aid to the FSM. This grant assistance plays an important role in promoting FSM's economic and social development. China's framework emphasizes long-term cooperation in various sectors including infrastructure, livelihoods and emergency humanitarian assistance.

5.03 Key Cross Cutting Development Themes

This section provides an overview of cross-cutting themes that have emerged as pivotal areas of focus. These cross-cutting themes intersect multiple areas of development, addressing overarching challenges and opportunities that span different sectors.

Based on the evaluation of development themes for funding, the following cross-cutting themes have been identified:

a) **Gender Equality, Disability, and Social Inclusion** (GEDSI) GEDSI is a comprehensive framework aimed at promoting equitable outcomes for all individuals regardless of gender, disability, or social status. It seeks to eliminate discrimination and ensure equal opportunities by addressing systemic barriers and fostering inclusive practises. This involves creating accessible environments, advocating for policy changes, and engaging communities to support full participation and empowerment of marginalised groups, ultimately striving to build a more inclusive and equitable society. Incorporating GEDSI into infrastructure projects involves designing and implementing these projects to ensure they are accessible, inclusive, and equitable for all individuals, this should therefore be considered for all infrastructure projects. By integrating GEDSI principles, infrastructure projects can become more inclusive, benefiting a broader segment of the population and ensuring equitable access to public resources and services.

b) **Climate Resilient Infrastructure and Disaster Risk Reduction** Climate resilient infrastructure involves designing, constructing, and maintaining systems to withstand the impacts of climate change such as extreme weather and rising sea levels. Integrating climate resilience into infrastructure projects ensures durability and functionality under changing conditions, protecting investments and communities, and promoting sustainable development.

   Disaster Risk Reduction involves initiatives to mitigate the impact of natural hazards, ensuring safer, more resilient communities and reducing economic losses. In infrastructure projects, this means implementing measures such as robust building designs, efficient early warning systems, and comprehensive risk assessments.

c) **Connectivity and Transport** – This theme covers the development and improvement of transport infrastructure (roads, public transport systems, ports, and airports) emphasising sustainable and integrated transportation solutions. It focuses on creating and improving infrastructure to enhance transport connectivity and efficiency.

   Energy – Emphasising the development and integration of renewable energy sources like solar, wind, hydro, and geothermal, alongside advancements in energy efficiency and smart grid technologies.

d) **Water Security –** Water security relates to ensuring continued access to sufficient quantities of acceptable quality water for sustaining livelihoods, human well-being, and socioeconomic development, while managing water-related risks. In infrastructure projects, this means designing systems that sustainably manage water resources, prevent scarcity, and mitigate disaster risks. Infrastructure examples include building water storage, rainwater harvesting, and implementing water efficient technologies. Water security in the FSM is likely to become an increasingly difficult challenge in the context of climate change, which will negatively impact the quality and quantity of both surface freshwater and groundwater.

e) **Sanitation and Solid Waste** – Sanitation involves providing facilities and services for the safe management of human waste to prevent disease and ensure environmental hygiene. Infrastructure examples include sewage treatment plants, sewer lift stations and effluent disposal systems. Sanitation infrastructure projects help to protect public health, reduce waterborne diseases, and support sustainable development, fostering healthier communities and a cleaner environment. Solid waste management is one of the most pressing environmental, social and economic issues facing sustainable development in FSM. FSM increasingly relies on imported consumer goods packed with plastic materials and waste, and there is an urgent need to develop self-sustaining waste management systems, including waste minimization, safe and sanitary public landfills, recycling and compost facilities.

f) **Public Health** – This involves initiatives that support the health and welfare of the population. Infrastructure examples include the building and upgrading of healthcare facilities and improving access to medical services through purchasing a medical support vessel. These efforts intersect with water supply and sanitation infrastructure as improving water quality and sanitation will have direct benefits on the quality of life, and reduce the burden on health services.

g) **Education** – This involves initiatives that are aimed at improving access to quality education for all. In the context of infrastructure, this includes the construction or renovation for educational infrastructure, providing essential utilities such as electricity, clean water, and sanitation facilities, as well as developing reliable transportation networks to enable students to safely and easily travel to and from educational institutions. These efforts collectively create a robust educational environment that supports effective learning and development.

h) **Social Protection** and Food Security – Social protection programs provide benefits to individuals on the basis of risks faced across the life cycle (e.g., unemployment, disability, maternity, etc.) and to those suffering general poverty and social exclusion. Climate change will continue to increase the risks people face throughout their lives, directly increasing poverty, vulnerability and inequality. Social protection is widely recognized as an essential strategy to help to stabilize the economy and protect vulnerable groups and infrastructure projects that enhance food security will assist this.

i) **Economic Development**– Economic development involves creating conditions that support economic growth, job creation, and improved living standards. Infrastructure project examples include developing agricultural and fisheries facilities, improving transportation links, and building public markets. By incorporating economic development principles, projects can attract investment, stimulate local economies, and provide employment opportunities, leading to overall socio-economic progress and enhanced quality of life.

j) **Governance** – Strengthening democratic institutions and processes to enhance democracy, human rights and governance. This ensures that governance frameworks support the efficient planning, management, and implementation of infrastructure projects.

Table 24 summarizes the above key development partner themes. Table 25 shows the priority projects and alignment with the development partner themes.

Table 24: Summary of Key Development Partner Themes

5.04 Annual Review of Priority List

As infrastructure needs and state priorities evolve, it is envisaged that additional projects will need to be added to the priority list. As such, it is recommended that the priority list remain a live document, with annual reviews undertaken utilising streamlined methods such as MoSCoW prioritisation, to allow for agile decision-making that can effectively respond to the evolving development landscape, promoting alignment with state priorities and efficient allocation of resources.

The current priority list has been developed through robust analyses and prioritisation exercises including Multi-Criteria Analysis (MCA), Impact-Effort Priority Matrix, and MoSCoW prioritisation exercise, allowing for a thorough evaluation of the potential infrastructure projects.

Although the MCA and PBN serves as the initial mechanism in the project prioritization process, it is highly recommended the authors of the PBNs are interviewed by a committee or IPIC to ensure that all critical elements and information pertaining the projects are clearly addressed.

However, it is expected that additional projects will be added to the current pipeline as infrastructure needs and state priorities evolve over time. Therefore, it is envisaged that the priority list should be a live document, allowing adaptation to the evolving infrastructure and strategic landscape. As such, it is recommended that the priority list be reviewed and updated annually to remain relevant and aligned to state priorities.

In undertaking these reviews, it is expected that comprehensive MCAs will not necessarily be required. Instead, it is recommended that subsequent reviews adopt a more streamlined approach, utilising simpler methods such as MoSCoW prioritisation (refer to Section 4.04 for a more detailed explanation on this method). This will allow for more agile decision-making, maintaining focus on addressing immediate needs quickly while also considering other critical infrastructure needs that may require a more intensive effort and careful management.

Undertaking annual reviews of the priority list using methods such as MoSCoW prioritisation may provide the state an effective mechanism through which it can maintain a relevant and adaptable development plan. This approach ensures recognition of the evolving development landscape, maintaining alignment between prioritised projects and the strategic objectives of the state while keeping the decision-making process simple and promoting efficient resource allocation.

Appendix A :
Project Briefing Notes

This Appendix contains project briefs for the thirteen priority projects identified for Compact funding, including co-funding with development partners (Table 19 and Table 20 in Section 4.04).

ID	Lead	Type	Project/Program	Cost ($m)*	Year
ED1	PMO	New	School Improvement Program - Phase 2 (10)	63.0	2025

RD5	CSOP	Upgrade	Wichap to Epinup Primary Road on Weno	6.0	

Project Name	**ED1: School Improvement Program – Phase 2**		
Description	Construction of 10 elementary schools under the second phase of the School Improvement Program. Central Wonip Elementary, Fananu Elementary, Lekinioch Elementary and Junior High, Murilo Elementary, Oneop Elementary, Polowot Elementary, Ruo Elementary, Tamatam Elementary, Unanu Elementary, Piisemwar Elementary.		
Location	Chuuk, FSM		
Lead Agency	PMO, coordinating with the DOE		
Project Type	New construction	Cost Estimate	**$63,000,000**
Project Driver	Students at these schools currently attend classes in buildings that are in poor condition, and are using school facilities, community halls, and/or churches.		

Impact / Benefit Assessment

Economic	▪ Foster wider economic benefits by creating jobs, enhance skills, encourage sustainable practices, supporting the growth and resilience of island communities. ▪ Leveraging local resources and installing renewable energy will reduce ongoing costs.
Social	▪ Provide children with access to education without the need to travel long distances. This will reduce the drop-out rates and encourage higher enrolment. ▪ Project will involve local and regional government, enhancing their presence and service delivery in remote areas, leading to better governance and increased public trust.
Environment and Resilience	▪ The new school buildings will be constructed to withstand extreme weather events so that they can be used as a typhoon shelter. This would provide a critical community resource during emergencies, enhancing local disaster preparedness. ▪ Install rainwater harvesting systems and efficient drainage to improve water supply for the school and community. ▪ Incorporate solar panel installation to reduce dependency on fossil fuels and enhance energy security.
Institutional and Efficiency	▪ Using similar or identical materials, funding and resources across the 10 schools in the program, the government can improve procurement and construction efficiency and ensure equitable distribution.

Implementation Effort / Risk

Complexity	▪ Previous similar projects and will require offshore expertise in the design development.
Delivery Risk	▪ Local contractors can bid for and implement projects, little need for outsourcing labour. ▪ There may be a procurement risk in acquiring the necessary building materials.
Sustainability	▪ Operations and maintenance costs have been estimated and considered.
Project Readiness	▪ Project is ready to start and a priority for DOE. Ongoing costs have been considered.

Multi-Criteria Analysis Results

Impact Score	2.6	Medium	Effort Score	2.9	High

Prepared By: *Alvin Mori, Chuuk PMO Fiscal Officer, September 2024*

Project Name	**EN2: New Office for CPUC and AMU**
Description	New office building for Chuuk Public Utility Corporation (CPUC) and Association of Micronesia Utilities (AMU) with meeting rooms for customer discussions, seating/waiting area for customers, warehouse space for business supplies, revenue meters etc. and parking for customers, staff and the CPUC boat used regularly for visits to municipalities within Chuuk lagoon.
Location	Mechitiw, Weno, Chuuk
Lead Agency	CPUC coordinating with Chuuk State Government
Project Type	New construction
Cost Estimate	**$3,000,000**
Project Driver	The condition of the office space rented is substandard and there are no facilities for meeting with customers nor is there a customer waiting/seating area. A new office facility will establish a suitable work environment to best deliver services to customers. It will also provide meeting facilities to better communicate and interact with the multiple stakeholders including development partners based overseas.

Impact / Benefit Assessment

Economic	▪ Annual recurring savings on rental cost ▪ Housing the AMU in Chuuk will bring in funding to Chuuk. CPUC will have immediate/easy access to the resource; Subleasing to AMU will generate income.
Social	▪ Comfortable facilities for customer interactions – improvement in customer service and responsiveness
Environment and Resilience	▪ The project will be constructed in an environmentally and energy efficient manner considering climate changes risks.
Institutional and Efficiency	▪ Provide an improve customer experience when interfacing directly with CPUC. ▪ CPUC head office staff will have improved facilities and easier internal communication. ▪ Reduce the unnecessary expenses such as meetings taking place in a rented space.

Implementation Effort / Risk

Complexity	▪ Conventional construction and can be undertaken by local contractors. ▪ A construction period of 12 months is expected.
Delivery Risk	▪ Materials delivery – low risk the components required for the construction can be sourced in FSM. ▪ Installation contractors – tradespeople with the skills required are available in Chuuk and wider FSM.
Sustainability	▪ CPUC is used to managing and maintain office facilities and budgets for related expenditures every year in their annual budget.
Project Readiness	▪ Project is ready to start and ongoing costs have been considered.

Multi-Criteria Analysis Results

Impact Score	3.0	High	Effort Score	1.7	Low

Prepared By: *Leialoha, Shirai, CPUC Chief Financial Officer, August 2024*

Project Name	**GB4: New Tourism Center and Improvement Sites**
Description	New Chuuk Visitors Bureau (CVB) Cultural Center two-storey building or museum to hold and display the history of Chuuk. This would have the features of a museum with open concept space on the first floor to accommodate platforms for displaying artifacts in glass cubes. The second floor would be the administration office and other relevant offices for a Visitor's Bureau. This center represents $800,000 of the estimated cost, the remaining $250,000 in the cost estimate is for improving tourism sites around Chuuk.
Location	Weno, Chuuk
Lead Agency	Chuuk Visitors Bureau, coordinating with Planning Office and PMO
Project Type	New Construction — Cost Estimate: **$1,050,000**
Project Driver	The impact of this project can significantly improve social and economic benefits for the state itself and its people. The history of any country is usually stored in museums, and this is where the new generation can go to learn Chuuk history and for tourists to visit. The building itself will be an attraction as it will feature local designs.

Impact / Benefit Assessment

Economic	▪ The effects of tourist coming after visiting the building and spread the information as Chuuk State is famous diving spot.
Social	▪ The young generations will learn the history, culture and traditions. ▪ Significant improvement on local craftmanship, the center can serve as a hub learning local craftmanship, local skirt sewing and wooden carvings.
Environment and Resilience	▪ New buildings constructed to endure earthquakes, typhoons, and the impacts of climate change. ▪ May be utilized as typhoon shelters.
Institutional and Efficiency	▪ The project will make the government more efficient in terms of fact finding, storing valuable information about geographical significance of each island

Implementation Effort / Risk

Complexity	▪ Need to assess stability of soil or earth to accommodate two-storey building that can withstand earthquakes and strong typhoon winds.
Delivery Risk	▪ Local contractors can bid for and implement projects, little need for outsourcing labour. ▪ There may be a procurement risk in acquiring the necessary building materials.
Sustainability	▪ Operations and maintenance costs have been estimated and considered during the scoping of the project.
Project Readiness	▪ Project is ready to start and a priority for the Chuuk Visitors Bureau. Ongoing costs have been considered.

Multi-Criteria Analysis Results

Impact Score	2.1	Low	Effort Score	1.6	Word

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, September 2024*

Project Name	**GB5: Government Building Renovation Program (2 projects)**		
Description	Two projects included in this program: Department of Public Works and Transport (DPW&T) Office/Warehouse and the Governor's Executive Residence Rehabilitation. A two-storey government building is much needed at this point to store a large number of files and also house coordinators from the national to work with state level programs. It only needs office spaces and a storage room.		
Location	Weno, Chuuk		
Lead Agency	Planning Office, Coordinating with PMO		
Project Type	Rehabilitation	Cost Estimate	**$800,000**
Project Driver	The renovation of both the Governor's residence and public works warehouse is critical at this moment. First and foremost, not having a Governor's residence means spending on the rent for the governor which he is allotted in his contract. Having a state residence is a reasonable asset to the state as well as having a warehouse for public works to store all the government equipment.		

Impact / Benefit Assessment

Economic	▪ Financially these projects will certainly cut costs on space rental and of course storage of important assets of the government with the public works, warehouse it's as important as storing important files in an office.
Social	▪
Environment and Resilience	▪ The project will create an eco-friendly environment in that it will store a large heavy equipment in a safe closed off warehouse and not have it exposed. Having it in a storage facility will give these governments assets a longer lifespan and less maintenance on it. ▪ Governor residence is not applicable.
Institutional and Efficiency	▪ The public works warehouse only serves as a storage facility to house heavy equipment that maintain the roads. Having this storage facility is required to keep our heavy equipment maintained and safe.

Implementation Effort / Risk

Complexity	▪ Does not require outside expertise. All works with this project can be acquired locally.
Delivery Risk	▪ Low risk levels envisaged. Usual weather delays.
Sustainability	▪ We have the on-island expertise, but funding challenges is a reality. If we can secure the funding all will fall in place.
Project Readiness	▪ Project is ready and is a priority project of the Planning Office.

Multi-Criteria Analysis Results

Impact Score	2.0	Low	Effort Score	1.4	Low

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, November 2024*

Project Name	**HE1: Construction of New Chuuk Hospital**		
Description	Construction of a new 140-bed hospital facility to provide necessary health care to the citizens of Chuuk.		
Location	Weno, Chuuk		
Lead Agency	PMO, Coordinating with Department of Health Services		
Project Type	New Construction	Cost Estimate	**$135,000,000**
Project Driver	The current hospital needs major renovations which is increasing on an annual basis. Without a new hospital, operations and maintenance expenses will continue to increase, and space for any future health additions or programs will not be possible.		

Impact / Benefit Assessment

Economic	▪ An increased number of beds to 140 will support the vast population of Chuuk State. ▪ Improving health care can reduce the offshore medical referral.
Social	▪ Increase efficiency in services for patients in accessibilities and responsiveness. ▪ Timely interventions and comprehensive care, including emergency, preventive and rehabilitative services. ▪ Integrate traditions and indigenous cultures into it care practices to promote health equity and community trust.
Environment and Resilience	▪ Incorporate advance building techniques and materials designed to withstand natural hazards such as floods, earthquakes and extreme weather events. ▪ Implementing green building practices, such as energy-efficient systems, rain harvesting
Institutional and Efficiency	▪ Streamlining healthcare delivery through integrated system that reduce administrative burdens and optimize resource allocations. ▪ Advance training for the staff, access to new tools, leading enhanced clinical outcomes.

Implementation Effort / Risk

Complexity	▪ Requires consultant in the design development. Offshore contractors for construction.
Delivery Risk	▪ Limited construction materials supply on Island ▪ Limited capable contractors in the island.
Sustainability	▪ Operations and maintenance costs have been estimated and considered during the scoping of the project.
Project Readiness	▪ Design of the new hospital was estimated to be 80% complete at the end of 2023/24. Construction of the hospital is a priority for the state and DHS.

Multi-Criteria Analysis Results

Impact Score	3.6	High	Effort Score	3.6	High

Prepared By: *Alvin Mori, PMO Fiscal Officer, October 2024*

Project Name	**HE2: DHS Incinerator Facility (HRP Phase 2)**		
Description	To construct a new incinerator facility as it is a requirement of any hospital to safely dispose of hazardous waste coming from the hospital		
Location	Weno, Chuuk		
Lead Agency	Department of Health Services coordinating with Planning Office		
Project Type	New construction	Cost Estimate	**$200,000**
Project Driver	The Department of health currently has a dilapidated incinerator facility which caught fire a little over two years ago. The hazardous waste needs to dispose properly.		

Impact / Benefit Assessment

Economic	▪ Environmental cost of the current situation with an incinerator in very poor condition that is preventing safe disposal of hazardous waste.
Social	▪ Enable the proper disposal of hazardous medical waste and prevent the waste being exposed in an open dumpsite if it were to be collected with regular trash. ▪ Reduce the chances of wide-spread diseases.
Environment and Resilience	▪ Studies and plans remain ongoing, such as geotechnical investigations and considerations of solar panels for shading parking areas and roofs, to ensure the new hospital is climate resilient and eco-friendly.
Institutional and Efficiency	▪ Completing this facility upgrade will ensure increased efficiency in services for government and for the people.

Implementation Effort / Risk

Complexity	▪ Does not require outside expertise to construct and install.
Delivery Risk	▪ Limited Shipping/Import schedule. ▪ Possible material and supplies shortage due to limited local supplies.
Sustainability	▪ There are on-island experts to operate and maintain an incinerator currently working for DHS.
Project Readiness	▪ Project is ready to start and a priority for the state and the Department of Health Services.

Multi-Criteria Analysis Results

Impact Score	2.3	Low	Effort Score	1.7	Low

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, November 2024*

Project Name	**HE3: DHS Medical Support Ship**		
Description	Acquire a medical vessel that can attend to the basic medical needs of the Islands and Municipalities that have yet to have a Health Dispensary and to attend to the remote communities of Chuuk State.		
Location	Chuuk, FSM		
Lead Agency	Department of Health Services coordinating with Planning Office and PMO		
Project Type	Purchase	Cost Estimate	**$900,000**
Project Driver	To enhance the availability and accessibility of essential medical resources to improve public health outcomes. To address logistical challenges in transportation and supply chain management and ensure timely delivery of health products across the islands.		

Impact / Benefit Assessment

Economic	▪ Reduce government expenditure by providing accessible healthcare through medical vessel. The project minimizes the need of costly infrastructure investment in remote islands. ▪ Revenue generation – project can create revenues streams through partnerships with health care. ▪ Enhancing health services can foster a more robust workforce, as healthier individuals contribute to economic productivity.
Social	▪ Address the geographical and logistical barriers that limit healthcare access. ▪ Facilitate health education and preventive care programs, thereby fostering community health awareness.
Environment and Resilience	▪ Enhance accessibility and Mobility – This reduces vulnerability by ensuring that essential healthcare is available when land route is compromised. ▪ Sustainable practices and community engagement incorporating environmentally friendly technologies and practices.
Institutional and Efficiency	▪ Allows quicker diagnosis and treatment, reducing the need for patients to travel long distance. ▪ Training local healthcare staff in modern technologies and best practices. ▪ Connecting dispensaries regionally collaborating among health providers, enhancing services delivery and resource sharing.

Implementation Effort / Risk

Complexity	▪ This is a purchase project and will require offshore expertise.
Delivery Risk	▪ Delayed in funding approval and limited remote islands infrastructure.
Sustainability	▪ Some O&M expertise will have to be outsourced (offshore).
Project Readiness	▪ Project is ready to start and a priority for DHS. Ongoing costs have been considered.

Multi-Criteria Analysis Results

Impact Score	2.7	Medium	Effort Score	2.4	Medium

Prepared By: *Alvin Mori, Fiscal Officer - PMO, October 2024*

Project Name	**HE4: Public Health Two-Storey Building (HRP Phase 2)**		
Description	A central public health facility will be set up next to the current hospital located in Nantaku under the Health Renovation Program (HRP) Phase 2. This public health facility needs to house a dental clinic, a family health care planning office, a behavioural health and wellness office and lastly a non-communicable disease office. Each office will have its own supply room, with central administration office located on the second floor of the building.		
Location	Nantaku, Weno, Chuuk		
Lead Agency	Department of Health, Coordination with Planning Office.		
Project Type	New Construction	Cost Estimate	**$600,000**
Project Driver	The need for this office is very critical as it prioritizes pregnancies, NCD cases and as a health clinic more patients can access medicine easier as they are put on plans.		

Impact / Benefit Assessment

Economic	▪ Create jobs during for the local during construction.
Social	▪ More community outreach programs. ▪ More training for local staff and increase capacity to accommodate patients coming from the remote areas.
Environment and Resilience	▪ Create awareness outreach in the areas such as safety, cleanliness and resilience with each community. The awareness sessions will advocate utilizing safe structures to house, medevac and nurse patients.
Institutional and Efficiency	▪ Encourage smaller dispensaries of outer island communities to communicate, transport and bring the patients and potentially reduce fatalities.

Implementation Effort / Risk

Complexity	▪ The project is not new to FSM.
Delivery Risk	▪ Local contractors can bid for and implements projects. ▪ Procurement risk of acquiring necessary construction materials.
Sustainability	
Project Readiness	▪ Project is ready to start and a priority for DHS.

Multi-Criteria Analysis Results

Impact Score	2.4	Medium	Effort Score	2.4	Medium

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, September 2024*

Project Name	**HE5: Outer Island Dispensaries Program –13 Locations (Phase 2)**		
Description	Construction of 14 Health Dispensaries – Lekinioch, Satowan, Ettal, Moch, Namoluk, Oneop, Polowot, Pollap, Tamatam, Fananu, Murilo, Ruo and Unanu.		
Location	Chuuk, FSM		
Lead Agency	PMO, Coordinating with Office of Planning and Health		
Project Type	New Construction	Cost Estimate	**$15,600,000**
Project Driver	Basic medical services to the people in the remote islands.		

Impact / Benefit Assessment

Economic	▪ Reduce expenditures by lowering the needs for medivac and streamlining healthcare access. ▪ Establish avenues for revenue generation via healthcare services and collaborations with local enterprises, promoting a more sustainable economy. ▪ Enhance productivity and quality of life while supporting community development and local initiatives.
Social	▪ Reducing travel time for patients and enabling timely life-saving interventions. ▪ Immediate access to essential medical services. ▪ Empowering the local communities with knowledge on disease prevention and healthy practices
Environment and Resilience	▪ Timely medical care during emergencies and disaster. ▪ Act as center for community education on disaster preparedness, climate adaptation and health risks linked to climate change ▪ Reduce fossil fuel reliance by utilizing renewable energy for dispensaries and minimizing long -distance boat travel
Institutional and Efficiency	▪ Improve diagnosis and treatment speed. ▪ Training local healthcare staff in advance technologies ▪ Promote collaboration, enhancing service delivery and resource sharing.

Implementation Effort / Risk

Complexity	▪ The project is not new to FSM.
Delivery Risk	▪ Limited utilities on remote islands (electricity, communication and water) ▪ Procurement risk of acquiring materials and delays in logistics to remote outer islands.
Sustainability	▪
Project Readiness	▪ Project is ready to start and a priority for DHS.

Multi-Criteria Analysis Results

Impact Score	2.4	Medium	Effort Score	2.7	High

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, September 2024*

Project Name	**HE6: Outer Island Dispensaries Program – Onoun (HIP - Phase 2)**		
Description	Construction of 1 health dispensary building in Onoun		
Location	Chuuk, FSM		
Lead Agency	PMO, Coordinating with Office of Planning and Health		
Project Type	New Construction	Cost Estimate	**$1,100,000**
Project Driver	Basic medical services to the people in the remote islands.		

Impact / Benefit Assessment

Economic	▪ Reduce expenditures by lowering the needs for medivac and streamlining healthcare access. ▪ Establish avenues for revenue generation via healthcare services and collaborations with local enterprises, promoting a more sustainable economy. ▪ Enhance productivity and quality of life while supporting community development and local initiatives.
Social	▪ Reducing travel time for patients and enabling timely life-saving interventions. ▪ Immediate access to essential medical services. ▪ Empowering the local communities with knowledge on disease prevention and healthy practices
Environment and Resilience	▪ Timely medical care during emergencies and disaster. ▪ Act as center for community education on disaster preparedness, climate adaptation and health risks linked to climate change ▪ Reduce fossil fuel reliance by utilizing renewable energy for dispensaries and minimizing long -distance boat travel
Institutional and Efficiency	▪ Improve diagnosis and treatment speed. ▪ Training local healthcare staff in advance technologies ▪ Promote collaboration, enhancing service delivery and resource sharing.

Implementation Effort / Risk

Complexity	▪ The project is not new to FSM.
Delivery Risk	▪ Limited utilities on remote islands (electricity, communication and water) ▪ Procurement risk of acquiring materials and delays in logistics to remote outer islands.
Sustainability	
Project Readiness	▪ Project is ready to start and a priority for DHS.

Multi-Criteria Analysis Results

Impact Score	2.4	Medium	Effort Score	2.4	Medium

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, September 2024*

Project Name	**RD1: Epinup to Sapuk Road Extension**		
Description	Improve road conditions from Epinup to Sapuk by upgrading 4.5 miles of roads to sealed road standard (generally 22-foot asphalt surfaced carriageway with open side drains as required).		
Location	Chuuk, FSM		
Lead Agency	CSOP, Coordinating with DOT		
Project Type	Upgrade	Cost Estimate	**$15,000,000**
Project Driver	Deteriorating roads can lead to higher vehicle maintenance costs due to damage from potholes, ruts, and uneven surfaces. Poor road conditions can deter investment and limit access to markets, reducing economic opportunities, particularly in rural or remote areas. Deteriorating roads can limit access to healthcare, education, and emergency services, particularly in rural areas.		

Impact / Benefit Assessment

Economic	▪ Improves its durability, reducing the frequency and cost of repairs. Well-built roads need less ongoing maintenance, which lowers long-term government spending.
Social	▪ Better roads provide easier access to education, healthcare, and other essential services, leading to a healthier, more educated workforce.
Environment and Resilience	▪ Upgrading the road often involves improving drainage systems, which can prevent pollutants from road runoff (like oil, heavy metals, and chemicals) from entering nearby water bodies, protecting local ecosystems and water quality.
Institutional and Efficiency	▪ Enhanced roads make it easier for communities to interact, participate in regional events, and access cultural and social services. This strengthens regional identity and cohesion.

Implementation Effort / Risk

Complexity	▪ The magnitude of the project and works involved will require offshore expertise in design and possibly construction.
Delivery Risk	▪ A lack of skilled labour in the region might slow down construction or reduce the quality of the work, requiring rework and causing delays ▪ Difficult terrain, poor soil conditions, or other unforeseen technical challenges might slow down progress or require more complex engineering solutions
Sustainability	▪ Department of Public Works & Transportation is capable of operating and maintaining the road
Project Readiness	▪ Project is ready to start and a priority for DOT

Multi-Criteria Analysis Results

Impact Score	2.4	Medium	Effort Score	2.4	Medium

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, August 2024*

Project Name	**RD3: Sapuk Circumferential Road**
Description	Improve road conditions of the Sapuk Circumferential Road by upgrading 2.8 miles of roads to sealed road standard (generally 22-foot asphalt surfaced carriageway with open side drains as required).
Location	Chuuk, FSM
Lead Agency	CSOP, Coordinating with DOT
Project Type	Upgrade
Cost Estimate	**$6,000,000**
Project Driver	Deteriorating roads can lead to higher vehicle maintenance costs due to damage from potholes, ruts, and uneven surfaces. Poor road conditions can deter investment and limit access to markets, reducing economic opportunities, particularly in rural or remote areas. Deteriorating roads can limit access to healthcare, education, and emergency services, particularly in rural areas.

Impact / Benefit Assessment

Economic	▪ Upgrading the Sapuk Circumferential Road can significantly reduce travel time for residents and businesses, leading to cost savings in fuel and vehicle maintenance. The reconstruction of the road would create long-term employment opportunities for the residents of Chuuk.
Social	▪ Upgraded roads reduce travel times, allowing people to spend more time on productive activities or with their families, thereby improving their quality of life.
Environment and Resilience	▪ In areas prone to natural disasters, a resilient road can ensure that vulnerable communities are not cut off from emergency services, shelters, or evacuation routes. This reduces the risk of harm during disasters and speeds up recovery efforts
Institutional and Efficiency	▪ Modernizing infrastructure encourages collaboration between different government departments, private contractors, and local communities. This collaborative approach can improve teamwork, project management skills, and cross-departmental coordination.

Implementation Effort / Risk

Complexity	▪ The magnitude of the project and works involved will require offshore expertise in design and possibly construction.
Delivery Risk	▪ A lack of skilled labour in the region might slow down construction or reduce the quality of the work, requiring rework and causing delays ▪ Difficult terrain, poor soil conditions, or other unforeseen technical challenges might slow down progress or require more complex engineering solutions
Sustainability	▪ Department of Public Works & Transportation is capable of operating and maintaining the road
Project Readiness	▪ Project is ready to start and a priority for DOT

Multi-Criteria Analysis Results

Impact Score	2.4	Medium	Effort Score	2.4	Medium

Prepared By: *Renados K. Kiyoshi, Chief of Planning, Chuuk, August 2024*

Project Name	**RD5: Wichap to Epinup Road**		
Description	Improve road conditions from Wichap to Epinup by upgrading 3 miles of roads to sealed road standard (generally 22-foot asphalt surfaced carriageway with open side drains as required).		
Location	Chuuk, FSM		
Lead Agency	CSOP, Coordinating with DOT		
Project Type	Upgrade	Cost Estimate	**$6,000,000**
Project Driver	The Unpaved and poor roads conditions of the islands, among other factors, have long been the major set-back for these Islands to be able to effectively promote private sector development, employment growth and tax base increases.		

Impact / Benefit Assessment

Economic	▪ Better roads can reduce traffic congestion, leading to lower vehicle operating costs and fuel consumption for both public and private vehicles. This efficiency can reduce the need for additional infrastructure or traffic management expenses.
Social	▪ Better roads enhance safety by decreasing the number of accidents, reducing the need for emergency services, law enforcement, and healthcare costs related to road incidents. This project would also allow easier access to education, healthcare, and other essential services, leading to a healthier, more educated workforce.
Environment and Resilience	▪ Upgrading the road often involves improving drainage systems, which can prevent water accumulation on the road during heavy rains, reducing the risk of flooding and subsequent road damage. Better drainage prevents erosion, which can undermine the road's foundation and lead to its collapse during extreme weather events.
Institutional and Efficiency	▪ Upgraded roads make it easier for government officials to travel across the island, ensuring that remote or underserved areas receive the necessary attention and resources.

Implementation Effort / Risk

Complexity	▪ The magnitude of the project and works involved will require offshore expertise in design and possibly construction.
Delivery Risk	▪ A lack of skilled labour in the region might slow down construction or reduce the quality of the work, requiring rework and causing delays ▪ Difficult terrain, poor soil conditions, or other unforeseen technical challenges might slow down progress or require more complex engineering solutions
Sustainability	▪ Department of Public Works & Transportation is capable of operating and maintaining the road
Project Readiness	▪ Project is ready to start and a priority for DOT
